Statement by the Minister

In presenting the Strategic plan for the Department of Agriculture 2006, we aim to assess our successes and achievements and focus on proposed steps to be taken in 2006 to accelerate service delivery and to achieve better results than in the past. During the past two years the department has shifted emphasis to focus more on improving our delivery infrastructure, increasing our capacities and speeding up the pace of delivery in pursuit of our vision of "a united and prosperous agricultural sector" as set out in The strategic plan for South African agriculture in 2001.

In celebrating the 50th anniversary of the Freedom Charter in 2005, the challenge of realising the Charter's declaration of a South Africa that belongs to all who live in it, Black and White, sharing in the wealth of our country, we strived to address the issues of land ownership, equal participation in agriculture and the true empowerment of all South Africans. A summit on Land and Agrarian Reform was held in Johannesburg in July 2005 to review progress in enabling access to agricultural land in the past decade and at the same time encourage dialogue among key partners and stakeholders on the best way to accelerate access to land. Of importance to agriculture was the call to improve on support services to newly settled

farmers in order to create a cadre of successful black farmers, able to contribute to the broader goals of job creation and poverty reduction.

Following the publication of the Agricultural Broad-Based Black Economic Empowerment (AgriBEE) framework in July 2004, a wide consultation process was followed, which culminated in the launch of the draft AgriBEE Charter at a national AgriBEE Indaba in December 2005. Upon the signing of the AgriBEE Charter, all AgriBEE initiatives will become fully operational and proposed systems will be implemented.

Fast-tracking the implementation of the Comprehensive Agricultural Support Programme (CASP) was a major challenge in our strategy to promote agricultural production among previously disadvantaged individuals and communities in 2005. Where previously the focus was on providing access to agricultural land through the Land Redistribution for Agricultural Development (LRAD) programme, CASP adds the vital element of post-settlement support, which is imperative to improve the production capacity of emerging farmers.

In terms of access to finance, the department worked together with the financial sector in launching the Micro-agricultural Financial Institutions of South Africa (Mafisa). This is the first state-owned scheme to provide micro and retail agricultural financial services on a large, accessible, cost-effective and sustainable basis. The objective of the scheme is to provide capital to increase support to agricultural activities in the communal land areas as well as the emerging farming sector.

Mafisa will work with financial institutions to implement the provisions in the financial services charter relevant to the development of small and medium-sized farming enterprises. This will leave the Land Bank to deal with the commercial sector. An amount of R1 billion was immediately made available to start the scheme. The approximately 10 million potential beneficiaries include farm and nonfarm entrepreneurs such as farmworkers, tenants, household producers, landless, small landholders, food garden producers and rural micro-entrepreneurs. The scheme includes four products and services for the employed rural poor and enterprises, namely credit, savings, insurance and payment facilities. Short and medium-term loans are provided through this scheme, with a number of permutations that would be available to the poor at the rural district councils of the poorest provinces in terms of the Human Development Index as determined by Statistics South Africa.

Although food prices remained unacceptably high, many food-insecure households benefited from measures such as the Agricultural Starter Pack Programme. To date starter packs were distributed to 18575 households and this will be increased to more than 62000 households through an extended programme. To further monitor the volatility of food prices, a food price monitoring system was introduced in the department and the first food price trends were released to inform Government on a regular basis. As part of the Integrated Food Security and Nutrition Programme (IFSNP), the Food Insecurity and Vulnerability Information Mapping System (FIVIMS) has been established to assess vulnerable and potentially vulnerable areas in the country. This mapping system is profiling the population and serves as a decision-making and monitoring tool to identify groups requiring food aid (food parcels).

Skills development and the broadening of access to agricultural education and training at all levels are critical success factors for the growth and transformation of the sector. To address the inadequacies in the current education system, the department and its partners developed the Agricultural Education and Training (AET) Strategy to restructure and reorient the system and address the education needs of small-scale and emerging farmers. This strategy was the product of extended consultation with various stakeholders within and outside the agricultural sector and was launched in September 2005.

In a further endeavour to bridge the gap between the first and second economies in our country, I announced an exciting new initiative in December 2005 linking agriculture with tourism. The AgriTourism programme is a response by the department to the opportunity that was offered by the growing tourism industry to enable emerging farmers to become participants in this venture. The objective within my department is to ensure that our farmers are capacitated and empowered to participate in the agritourism sector. This would result in an increased demand for agricultural products and services and the consequent add-on of improved selling of products, increased revenue, employment and investment.

During 2005 South Africa once again excelled in its endeavours to prevent and control the outbreak of animal diseases. Following a major effort on national and provincial level to curb the spread of avian influenza, South Africa was declared free from the disease in November 2005. This has in part maximised the opportunity for economic growth for our poultry farmers and the industry and at the same time demonstrated our ability to work in partnership with the industry to achieve national objectives. We also managed to curb the outbreak of Classical Swine fever. A voluntary ban was placed on the export of pigs and pork.

In its endeavour to contribute towards the realisation of Government's Accelerated and Shared Growth Initiative (ASGI), the department has started a process of developing detailed business plans for identified ASGI projects. The five key areas which have been identified, include livestock development, establishment of new and the rehabilitation of existing irrigation schemes, biofuels, land rehabilitation and the development of agricultural development corridors. Assistance will be provided to the emerging farming sector through programmes such as CASP, Mafisa and AgriBEE. During 2006 these programmes will be aligned to the broader aspirations of ASGI.

As we enter the year 2006, I believe that the many challenges facing Government and its social partners in meeting our strategic objectives include:

- Finalising the AgriBEE Scorecard by March 2006 to incorporate the proposals from the agricultural sector in the BEE codes of good practice
- Implementation of the AgriBEE Charter after it has been promulgated and launched officially
- Implementation of Mafisa
- Enhancement of CASP delivery at provincial level
- Improvement of continuous surveillance systems for effective monitoring of animal and plant diseases to minimise risks associated with disease outbreaks.
- Implementation of an effective agricultural disaster and risk management programme through the use of earlywarning and biosecurity disaster management systems
- Participating in projects in support of Government's Project Consolidate programme to improve and strengthen service delivery at local government level.

We look forward to meet the new challenges of 2006, to achieve higher rates of economic growth and development in the agricultural sector, to improve the quality of life for all our people in striving towards fulfilling our vision of a united a prosperous agricultural sector.

J. J. Didge

Ms Thoko Didiza (MP) MINISTER FOR AGRICULTURE AND LAND AFFAIRS

Director-General's overview

It is with pleasure that I submit the department's fifth strategic plan to the Minister for Agriculture and Land Affairs, for approval and tabling in Parliament. The plan for the 2006/07 financial year was compiled within the guidelines provided by National Treasury and the Department of Public Service and Administration.

OVERVIEW OF THE STRATEGIC PLAN

The Strategic plan for the Department of Agriculture 2006 (shortly referred to as the Strategic plan) is composed of five parts. Part one serves as an introduction and provides the political and organisational overviews. The sectoral overview and performance is reflected in Part two and contains information on the existing governance systems and challenges. Part three provides information on the department and gives insight into the organisational structure, its legislative mandate, the approved key result areas (KRAs) reflecting how these translate into departmental programmes, service delivery performance and human capital development. Part four focuses on work and budgets for the current financial year and Part five contains a summary of high-level deliverables or what can be seen as a department-wide business per quarter extracted from the

operational plans at programme level and presented in relation to each of our strategic priorities. In this section we also try to reflect the manner in which the different programmes contribute to the strategic priorities.

A set of annexures has been included as additional information to the Strategic plan. These include:

- Internal service delivery standards
- The information management plan
- The communication strategy.

In reflecting on what we have achieved in 2005 and the challenges we faced in meeting certain targets we had set for ourselves, it has become clear that the focus in the coming year has to be on the eight departmental priority areas and how to improve effective service delivery in these areas.

In the coming year we will continue with the empowerment of youth and women through the external bursary scheme, and the Experiential Learning and Internship Programmes. To this extent, we can inspire and support the entry of the youth into the sector because the growth and transformation of the sector depends on them.

AFRICAN AGRICULTURAL DEVELOPMENT PROGRAMME (AADP)

Regional stability and the sustainable development of the economies of African countries are in the interest of the entire continent. We have experienced an increase and overwhelming demand by individual African countries for technical assistance support in the field of agriculture. In 2006 we will focus on strengthening relations with African countries in order to achieve our goals of providing technical assistance, encouraging technology sharing and promoting trade using both bilateral and multilateral arrangements.

To ensure our contribution to a prosperous Africa and a better world, we will continue our close relationship with the Food and Agriculture Organisation (FAO). We had a regional meeting in Mali in January 2006 and are working with the FAO Africa Regional Office, New Partnership for Africa's Development (NEPAD) Secretariat and Forum for Agricultural Research in Africa (FARA) to ensure follow-up on the resolutions of the meeting. In the coming year we will continue to work with the FAO and some of the countries involved to ensure that we start to take a long-term view on the development of appropriate systems to assist countries in the region.

The implementation of the NEPAD/Comprehensive African Agricultural Development Programme (CAADP) remains of critical importance, hence the departmental support to the NEPAD secretariat for the holding of the Parliamentarians Dialogue on NEPAD/CAADP in May 2006.

AGRICULTURAL BROAD-BASED BLACK ECONOMIC EMPOWERMENT (AgriBEE)

The draft AgriBEE Charter which was directed by a 16-member Steering Committee, was developed through a wide consultation process with agricultural stakeholders and launched at a national Indaba in December 2005. From the beginning of 2006, stakeholders will start a process of communicating the draft charter to their constituents in collaboration with provinces. We have made good progress with the testing of business models with selected commodity groups and local development organisations working on how best to integrate emerging farmers into mainstream agriculture by exploring linkages with the established agricultural agents and this process will be finalised in 2006. This and other processes will be subjected to monitoring and evaluation systems for benchmarking and reviewing of broad-based BEE activities within the sector, to ensure the broadening of access to agriculture.

During 2006 training workshops will be undertaken by selected service providers aimed at promoting awareness, understanding and clarification of the impact on and relevance of broad-based BEE for local municipalities.

As part of the process to unlock the full entrepreneurial potential in the sector, we have been encouraging partnerships between established agricultural enterprises and emerging farmers and entrepreneurs. The implementation plan for the cotton industry was completed in 2005 and it is expected that the grain strategy's implementation plan will be concluded during 2006. The fruit industry's strategy is in the process of being developed and will be also be finalised in this financial year.

COMPREHENSIVE AGRICULTURAL SUPPORT PROGRAMME (CASP)

CASP is one of our vehicles for the provision of agricultural support to farmers. As the delivery of agricultural support is dependent on the capacity of provincial departments to render services, it is imperative that we drive the process of capacitating the provinces with regard to planning, implementation, information dissemination and reporting in order to achieve visible and desirable results. During the coming year members of my management team will be deployed to assist in improving service delivery.

We met the challenge by the President in 2004 to put in place an agricultural micro-finance scheme and launched the Micro-Agricultural Financial Institutions of South Africa (Mafisa) in 2005. The scheme was launched in the Limpopo, Eastern Cape, and KwaZulu-Natal provinces and will be rolled out to the other provinces in 2006. Within the provinces, steering committees will be established that will be responsible for facilitating implementation.

INTEGRATED FOOD SECURITY AND NUTRITION PROGRAMME (IFSNP)

In our endeavour to halve the estimated 2,2 million food insecure households in South Africa by 2015, we need to promote agricultural production at household level. Within the Social Sector Cluster we are challenged to take the

lead with regard to the implementation of the IFSNP. For this purpose, we will collaborate with relevant stakeholders, including nongovernmental organisations, schools and communities in general, to assist in the development and dissemination of suitable technologies, information and training modules to provide assistance in increasing levels of household food production.

A key intervention, developed as part of the IFSNP, has been the provision of agricultural starter packs to support agricultural production to more than 18000 households. In the next financial year, the distribution of starter packs will be extended to reach at least 62000 households as part of the extended programme.

KNOWLEDGE AND INFORMATION MANAGEMENT SYSTEMS (KIMS)

In the interest of building a knowledge-based agricultural sector, the management of knowledge and information will occupy centre stage in the functioning of the department in this financial year and in improving our stakeholders' access to information.

One of our main information management tools, the Agricultural Georeferenced Information System (AGIS) will be enhanced and promoted during the coming year. We will also use the World Overview for Conservation Approaches and Technologies (WOCAT) for information management and sharing at local and international levels.

As the official source of agricultural statistics in South Africa, we will focus on providing reliable, up-to-date information on the performance of the agricultural sector. The economic performance of the sector will be monitored quarterly and overviews of economic changes as well as the impact on the sector will be made available on a regular basis. We will furthermore continue to release monthly forecasts on the production of field crops, on a provincial basis.

To provide targeted marketing support, a state-aided programme, aimed at establishing agricultural marketing infrastructure to support agrarian reform beneficiaries in the rural development nodes, will be implemented during the coming year. We will continue with the development, printing and distribution of information booklets on marketing. These brochures will cover the basics of agricultural marketing and are targeted at developing farmers in all provinces in all official languages. Our web-based integrated agricultural marketing information system that was created to provide agricultural marketing information to farmers in rural development nodes will also be updated regularly.

NATURAL RESOURCES MANAGEMENT (NRM)

Critical to sustainable agriculture is the effective management of natural land resources and the preservation of biodiversity. In addition, fossil fuel and renewable energy sources contribute to sustainability and productivity in agriculture. A key challenge remains: how to improve efficiency of energy use and minimise the negative impact on the natural resource base on which sustainable agriculture depends. During this year an implementation plan for infrastructure development that will promote improved water use efficiency on irrigated land as well as a soil protection strategy will be developed. The Bill on the Sustainable Use of Agricultural Resources is on track and will be published in the near future.

The community-based LandCare Programme was expanded from focusing on rehabilitation and reclamation to also include eco-agriculture. The expanded programme also makes provision for investment in the Urban Renewal Programme through the proposed Urban Agriculture project.

NATIONAL REGULATORY SERVICES (NRS)

We will continue to deal with the challenges of regulating the safety of animal products and ensuring that the country is free from animal diseases. During 2005, animal disease outbreaks were contained successfully. We managed to curb the spread of avian influenza H5N2 and South Africa was declared free from the disease during the year. We also managed to curb the outbreak of Classical Swine fever and we are alert to the worldwide threat of the spread of bird flu. To contain disease outbreaks while at the same time strenghtening safety and quality control legislation, standards for plant and animal imports were promulgated in 2005. This included the publishing of the Animal Health Bill, 2002, which will replace the Animal Diseases Act, 1984 (Act No. 35 of 1984), and is awaiting proclamation.

The Agricultural Pests Act, 1983 (Act No. 36 of 1983), is presently undergoing an amendment process in order to bring it in line with the latest national and international developments. The amended act, that will be in line with national requirements and harmonised with international standards, will ensure effective prevention of the spread of pests.

As the country is experiencing an increase in tourism and trade in regulated agricultural products, the risk of illegal importation of agricultural products increases. Illegal importation or exportation of products poses the risk of a range of diseases and pests. We will continue strengthening capacity at all ports of entry in order to effectively manage the risks posed by animal and plant diseases and ensuring that agricultural products are safe and of good quality.

RESEARCH AND DEVELOPMENT (R&D)

Following the implementation of the new governance framework for science and technology, science councils have been transferred back to the full administrative responsibility of the relevant line function departments. In view of this development, full budgetary responsibility for the Agricultural Research Council was given to the department as from 1 April 2005, with implications for monitoring and evaluating its performance. This development gives us the opportunity to address the causes of the problems experienced as a result of insufficient national coordination and institutional frameworks.

We will finalise our research and development strategy, which was drafted in 2005 and presented to the National Agricultural Research Forum (NARF) in the coming year. In formulating this strategy, we also aim to provide guidelines for agricultural research, technology development and transfer.

ACCELERATED AND SHARED GROWTH INITIATIVE OF SOUTH AFRICA (ASGI-SA)

As part of our contribution towards the Government Accelerated and Shared Growth Initiative of South Africa (ASGI-SA), we identified five key focus areas, including livestock development, establishment of new irrigation schemes and the rehabilitation of existing ones, biofuels, land rehabilitation and the development of agricultural development corridors. We will provide assistance to emerging farmers by aligning some of our existing programmes such as CASP, Mafisa and AgriBEE to the broader objectives of ASGI-SA.

RESTRUCTURING OF THE DEPARTMENT

At the end of 2005, we reviewed the department's organisational structure in order to align it with the strategic objectives, strategies and programmes of the department. This review led to the restructuring of the macro organisational structure with an emphasis on strengthening the department's capacity to provide oversight on the implementation of national programmes, including programmes under the ASGI-SA, strengthening the biosafety component as well as the coordination of our intergovernmental and stakeholder relations. The new approved structure will become effective on 1 April 2006. We believe that this new structure will enhance performance of the organisation, increase the level of its resource utilisation, improve service delivery, ensure better co-ordination between different parts of the organisation, increase accountability and assist us to adjust to the changing needs of our clients.

I am convinced that the organisational performance will be improved by the creation of a programmes office on a high level, to ensure implementation of cross-cutting programmes and to monitor and evaluate progress.

In conclusion, we realise that there are major challenges facing us in the year ahead. However, we are convinced that with the policies, strategies and programmes that we have established we will succeed in contributing towards poverty eradication and in providing support to emerging farmers to ensure that their businesses become commercially viable in the long term.

I would like to use this opportunity to thank the Minister for her effective leadership, and the Deputy Minister and the Chairpersons of the Parliamentary Committees for their expertise and guidance. I also want to extend my appreciation to the leadership and staff of all the agriculture state-owned enterprises, the agribusiness community and farmer organisations ensuring that we meet our commitments to the South African agricultural public. I would also like to thank my management team and all the staff members in the department for their hard work in contributing to the development and implementation of the *Strategic plan*.

Mr Masiphula Mbongwa DIRECTOR-GENERAL: AGRICULTURE

Economic performance of the sector

NATURAL RESOURCES

The Republic of South Africa covers an area of 121,9 million ha and has a total population of about 46,6 million people. About 13% of South Africa's surface area can be used for crop production. High-potential arable land comprises only 22% of the total arable land. Slightly more than 1,3 million ha of land is under irrigation.

The most important factor that limits agricultural production is the availability of water. Rainfall is distributed unevenly across the country, with humid, subtropical conditions occurring in the east and dry, desert conditions in the west. Almost 50% of South Africa's water is used for agricultural purposes.

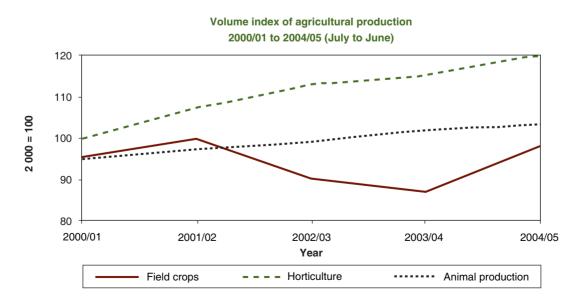

LAND USE PATTERNS

Land used for agriculture comprises 81% of the country's total area, while natural areas account for about 9%. Approximately 83% of agricultural land in South Africa is used for grazing, while 17% is cultivated for cash crops. Forestry comprises less than 2% of the land and approximately 12% is reserved for conservation purposes.

ECONOMIC SIGNIFICANCE OF THE SECTOR

Although agriculture contributed only 2,6% (R31,7 billion) to the total gross domestic product in 2004, it is important to note its backward and forward linkages to the national economy. Purchases of goods such as fertilisers, chemicals and implements form backward linkages with the manufacturing sector, while forward linkages are established through the supply of raw materials to industry. About 68% of agricultural output is used as intermediate products in the sector.

Formal agriculture provides employment for about 940 000 farmworkers. This includes seasonal and contract workers. In addition, the smallholder sector provides full or part-time employment for at least 1,3 million households. It is furthermore estimated that about 6 million people depend on agriculture for a livelihood. Generally, the number of jobs created per unit of investment is higher in agriculture than in other sectors. This implies that growth in agricultural output has a significant impact on job creation.

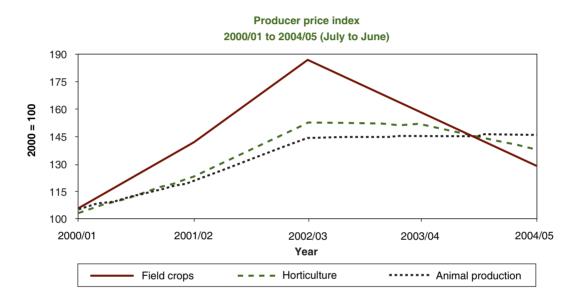

PRODUCTION

During the 12 months period that ended on 30 June 2005, the estimated volume of agricultural production was 5,7% higher than during the same period for 2004. The volume of field-crop production increased by 12,9% compared to the previous year as a result of increased maize and soya-bean production. Horticultural production increased by 4,4%, while animal production increased by 1,2%.

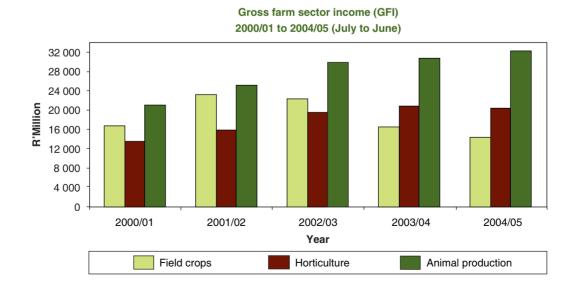

PRODUCER PRICES OF AGRICULTURAL PRODUCTS

Producer prices of agricultural products decreased on average, by 8,4% from 2003/04 to 2004/05. For the period under review, the combined producer price index of field crops was 18,4% lower than during the same period of the previous year. The prices of oilseeds, tobacco, winter cereals, cotton, hay and maize decreased by 32,7; 26,0; 24,2; 22,6; 21,6 and 17,1%, respectively.

Producer prices of horticultural products decreased by 9,0% when compared with those of 2003/04. This was mainly the result of a decrease of 14,1% in the prices of fresh vegetables. Prices of fruit also decreased by 5,9%.

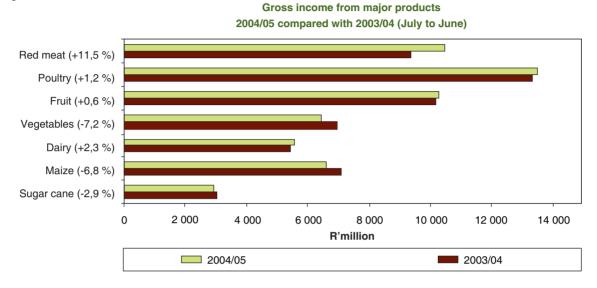

The producer prices of animal products were 0,4% higher in 2004/05 than in 2003/04. Prices of pastoral products and dairy products decreased by 10,8 and 3,7\%, respectively, while prices of slaughtered stock increased by 7,3%.

FARM SECTOR INCOME

The gross income of producers (the value of sales and production for other uses, plus the value of changes in inventories) for the year ended 30 June 2005, amounted to R67 103 million compared with the previous R68 430 milliona decrease of 2%.

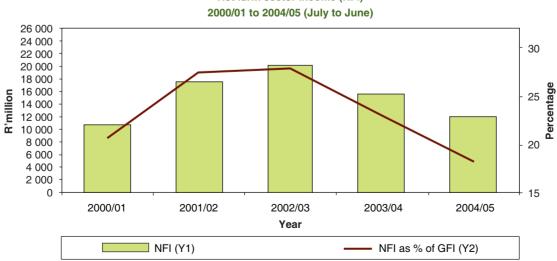

The gross income from field crops decreased by 12.9 % to R14 480 million for the year ended 30 June 2005. The reason for the decrease is mainly the lower prices that farmers received for summer grain crops, oilseeds and sugar cane.

The gross income from horticultural products decreased by 2,8% to R20 379 million, compared with last year's figure of R20 967 million. The income from deciduous fruit and subtropical fruit decreased by 2,7 and 2,2%, respectively. Income from viticulture also decreased by 5,1%. However, income from citrus production increased by 6,8%, while income from tree-nuts showed a small increase of 2,4%. Income from vegetable production decreased by 7,2% to R6 454 million.

The gross income from animal products was only 4,6% higher, and amounted to R32 243 million, compared to the previous R30 829 million. Producers earned R7 329 million from slaughtered cattle and calves, compared to the previous R6 411 million—an increase of 14.3%. The income from slaughtered sheep increased by 3,7% and amounted to R1706 million. The carcass prices of cattle and sheep increased by 8,3 and 4,3%, respectively. Income from poultry meat production increased by 1,5% to R10 440 million. Income from egg production remained at almost the same level as the previous year. Income from wool decreased by 14,7% and came down to R816,1 million.

The net farm income (after the deduction of all production expenditures, excluding expenditure on fixed assets and capital goods) decreased by 22% during 2004/05 and amounted to R12 188 million. Payments for salaries and

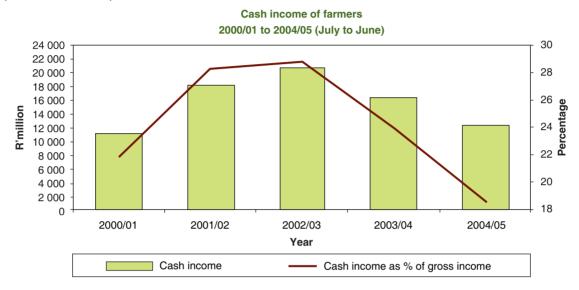

Net farm sector income (NFI)

12

wages, which constitute 16,7% of the total farm costs, amounted to R9 541 million. Interest paid by farmers to banks and other financiers during the 12 months period up to 30 June 2005, is estimated at R4 037 million or 7,1% of the total farm cost.

CASH FLOW OF FARMERS

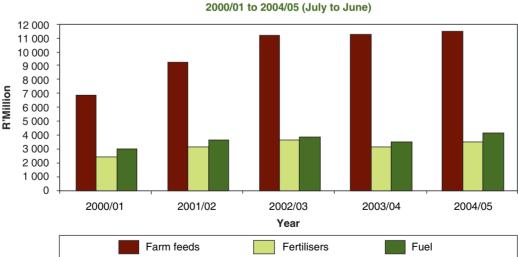

The cash flow of farmers amounted to R12 443 million, compared to the previous R16 404 million, for the year ended 30 June 2005—a decrease of 24,1%. This came as a result of a decrease in the gross income from field crops and horticultural products.

PRODUCTION COSTS

Expenditure on intermediate production inputs refers to the value of goods and services that were purchased for consumption as inputs during the process of production.

Expenditure on intermediate goods and services during 2004/05 is estimated at R40 157 million, which showed an increase of 5,9% from R37 931 million in 2003/04. Expenditure on fuel and fertilisers showed remarkable increases of 20,1 and 11,8%, respectively.

Expenditure on intermediate goods and services

Expenditure on farm feeds remained the largest intermediate item, accounting for 28,7% of the total expenditure, even though it showed a small increase (i.e. 2,3%) for the previous 12 months. Farm services, maintenance and repairs, fuel, and fertilisers contributed 11,3, 10,5, 10,4 and 8,8%, respectively, to the total intermediate expenditure. Expenditure on dips and sprays increased slightly by 0,3%, from R2 832 million to R2 839 million, while ex-

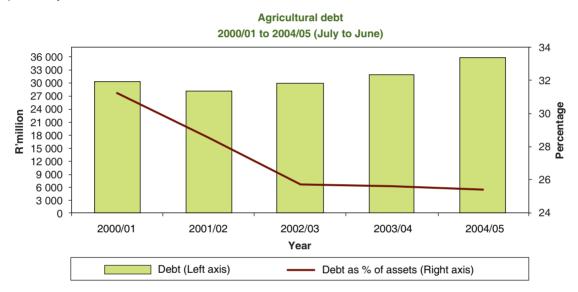

penditure on packing material increased by 3% to R2 581 million. Generally, there was an increase in the prices of goods and services purchased for use during the production process.

INVESTMENT

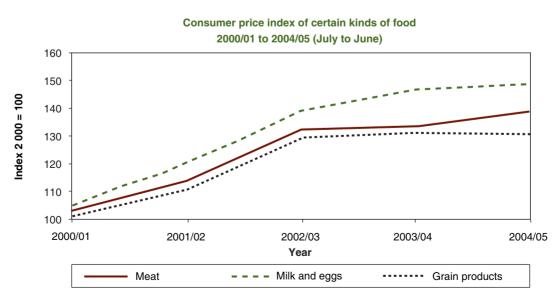

The value of capital assets in agriculture as at 31 June 2005 was estimated at R139 981 million compared to the R123 951 million of the previous year. Land and fixed improvements constituted R82 052 million, machinery and implements R24 786 million, while livestock constituted R33 143 million of the total value of capital assets. The gross investment in respect of fixed improvements for the year ended 30 June 2005 decreased by 2,2% to R2 964 million. In the case of machinery, implements and vehicles, investment decreased by 1,1% and amounted to R4 044 million. The change in the livestock inventory was positive owing to an increase in the number of cattle that were rounded off on farms, as well as an increase in the herd value per unit, owing to an increase of about 8% in the prices received for beef, compared to the previous year.

FARM SECTOR DEBT

The total farming debt at the end of June 2005 was estimated at R35 589 million compared to R31 826 million of the previous year—an increase of 11,8%.

14 International Strategic plan DoA 2006

The consumer price index on all items increased by 2,6% for the year ended 30 June 2005, while the price index of food and nonfood items increased by 1,6 and 3,4% respectively.

Meat prices increased by 4,2%, while the prices of grain products reflected a decrease of 0,4%. The consumer price of vegetables decreased by 2,9% and fruit prices increased by 3,7%. In the case of dairy products and eggs, prices increased by 1,5%, while an increase of 1,4% was recorded for sugar and related products.

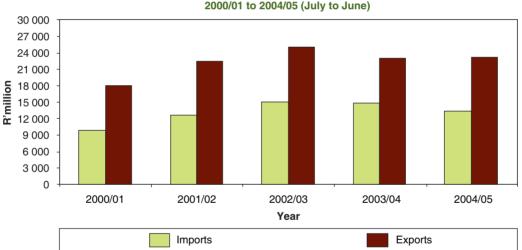

CONSUMPTION EXPENDITURE ON FOOD

The consumption expenditure on food for the year ended 30 June 2005 increased by 1,4% and amounted to R168 653 million, compared to the R166 340 million of the previous year. Expenditure on meat increased by 3,4% to R45 654 million, on fruit and vegetables (including potatoes) by 1,2% to R26 740 million, on milk, milk products and eggs by 10,7% to R15 785 million, and on sugar by 4,2% to R3 747 million. Expenditure on bread and grains decreased by 2,7% to R53 735 million, mainly owing to the lower prices paid by consumers for maize meal and maize products compared to the previous year. Expenditure on oils and fats also decreased by 6,7% from R3 313 million to R3 091 million.

Meat accounts for 27% of the expenditure on the food component, bread and grains for 32%, fruit and vegetables for 16%, while milk, milk products and eggs account for 9%.

IMPORTS AND EXPORTS OF AGRICULTURAL PRODUCTS

The value of imports for 2004/05 came down to R13 291 million—a decrease of 10,1% compared to the R14 788 million for 2003/04. The value of exports increased by 0,7% from R22 938 million for 2003/04 to R23 104 million for 2004/05.

Imports and exports of agricultural products

According to the 2004/05 export values, wine (R3 675 million), citrus fruit (R3 149 million), grapes (R1 927 million), fresh apples, pears and quinches (R1 810 million), as well as sugar (R1 515 million) were the most important export products. Rice (R1 490 million), wheat (R1 243 million), undenatuated ethyl alcohol (R1 025 million), oil cake (R885 million), meat and edible offal (R839 million) were the most important import products.

During 2004/05, the United Kingdom, The Netherlands, Zimbabwe, Germany and Japan were the five largest trading partners of South Africa in terms of export destinations, with export values of R3 756 million, R2 681 million, R1 481 million, R1 170 million and R1 092 million, respectively. About 28 % of all exports went to the United Kingdom and The Netherlands.

The five largest trading partners from whom South Africa imported agricultural products during 2004/05 were Argentina, Brazil, the United States, Thailand and United Kingdom, with import values of R2 416 million, R1 944 million, R1 289 million, R1 227 million and R1 044 million, respectively.

State of natural agricultural resources in South Africa

INTRODUCTION

Agriculture utilises natural resources for the production of products that are essential for the survival and wellbeing of the human population. It is mainly the responsibility of the agricultural sector to provide adequate quantities of food for South Africa's ever-growing population. No other economic sector can replace agriculture in this regard, especially concerning the large quantities of staple foods that are required in South Africa and within the SADC region.

The natural agricultural resources of the country are finite. New resources cannot be created. The net result is therefore the utilisation of marginal areas of land and more intensive utilisation of existing agricultural land in order to provide for the basic needs of the population.

THE NATURE AND QUALITY OF SOUTH AFRICA'S NATURAL AGRICULTURAL RESOURCES

Climate

South Africa is a hot and dry country. The average annual rainfall is less than 500 mm per annum, compared to the world average of 860 mm. Nearly a quarter of the country has an average annual rainfall of less than 200 mm. Only 35% of South Africa receives more than 500 mm, which is normally considered to be the minimum rainfall required for rain-fed cropping. The only significant area with relatively high rainfall is between the eastern escarpment and the east coast, viz. KwaZulu-Natal and the northeastern part of the Eastern Cape.

South Africa's rainfall is, for various reasons, very insufficient. Firstly, the high temperatures, very low relative humidities and extremely high vapour saturation deficits lead to very high potential evapotranspiration that far exceeds the rainfall. Consequently, less than 10% of the country is classified as humid. More than 75% of this condition prevails in KwaZulu-Natal and East Griqualand, with another significant area on the eastern escarpment of Mpuma-langa. Secondly, the rainfall is extremely erratic and unreliable. Prolonged droughts at critical stages of crop production occur frequently. This factor makes the production of rain-fed cropping to be a high-risk venture.

A key factor is the available rainfall during a critically important period for a specific crop, such as the tasselling stage for maize. Midsummer drought during January is a normal feature in South Africa's summer rainfall areas and this usually occurs at the tasselling stage for the maize crop. Breaking up rainfall data into decadal (10-day) figures has shown that each district in the maize quadrangle and adjoining areas has a specific 10-day period in January, differing between districts, during which the long-term average rainfall is much lower than for other decades. Planting dates, therefore, should be chosen to allow maize to reach the tasselling stage before or after such a normally dry decade.

The coastal plateaus along the eastern seaboard of South Africa do not have summer peak rainfall patterns. However, rainfall peaks during spring and autumn, with highly pronounced, extended midsummer drought periods, especially during January. The Limpopo Province experiences a critical period of very low humidities and high vapour saturation deficits during spring (especially October), before the onset of the rains, leading to serious climatically induced drought stress in some crops. This is devastating to some crops, particularly tea clones.

Water

Owing to the fact that South Africa's rainfall is low and erratic, and that much water is lost as a result of evaporation from the soil surface, the country has severely limited water resources. The average runoff for the country is only 8,5%.

The areas with the greatest contribution to the country's runoff are those that have the highest rainfall and are classified as humid to subhumid. The eastern plateau slope area, including the eastern parts of the Eastern Cape,

KwaZulu-Natal and the southern part of Swaziland, comprises only 14% of the country's land area, but contribute 43% of its runoff. Adding to this is the 12% of the total runoff contributed by the Upper Orange River region, therefore giving a total of 55% of the country's total runoff from only 19% of the surface area. In contrast to the eastern plateau slope areas, the southern coastal plateau rivers, from the Keiskamma in the east to the Berg in the west, drain 15% of the country's surface area, but contributes only 15% of the country's total runoff.

Sometimes very low runoff from an area with above average rainfall can lead to severe water shortages in catchments. The Limpopo River basin is a prime example of this. In the Limpopo River main basin, with an average annual rainfall of 555 mm (significantly above the country average of 497 mm), the runoff is only 4%. The result is that the water demand in the Limpopo basin in 1986 was already three times as high as its utilisable runoff. The water deficit in the Limpopo catchment in 1986 was already 1800 million cubic metres per year. The chronic water shortages confronting the irrigation farmers in the area are therefore not surprising.

In 1986 the rivers in the Western Cape already showed a water deficit, which has lately escalated extremely, owing to a large influx of people into the area since 1994. Again, the present severe chronic water shortages in this area, therefore, are not surprising. Ironically, almost all these people come from the former Transkei, the area with the largest volume of unused surplus runoff in the country.

In 1986, rivers in the Transkei, excluding the Great Kei, had the largest surplus of unused utilisable runoff of 3 800 million cubic metres per year. Most of the runoff flows into the uMzimvubu and its large tributaries, the uMzinhlava, Tina and Tsitsa. The 4 100 million cubic metres surplus runoff in the rivers in the Transkei (including the Great Kei) comprises 32% of the surplus runoff in the country that can be utilised.

Agriculture and forestry use 74% of South Africa's "potentially available rainwater". By far the largest volume of this (60%) is used to maintain the growth of forests and the natural vegetation that is utilised as grazing for livestock and game, while 12% is used for rain-fed cropping. Only 2% of the country's "potentially available rainwater" is used for irrigation. Irrigation is the largest single user of runoff water in the country. This necessitates expansion of the water storage system. In 1990, for example, 48% of all runoff water (dam) water that was being utilised in the country was used for irrigation. At that stage only 54% of the economically utilisable runoff was being used by all sectors in the country. Therefore only 26% of the country's utilisable runoff was used in irrigation. It is estimated that by 2010 approximately 46% of the runoff water that will be used in the country, will be used in irrigation. According to estimates the total use of runoff water by all sectors will be only 70% of the economically utilisable runoff by 2010. Even at that stage there will be large volumes of unused surplus runoff in the country. The challenge is that surplus runoff is found in areas where there is little, if any, economic development. Unfortunately, these are also the areas where irrigation requirements are relatively small, owing to the high levels of rainfall, whereas irrigation possibilities are limited, because of the topography.

Soils

South Africa falls within the relatively unknown "third major soil region of the world". The dominant soils of this region differ widely from those of the other two soil regions, viz. the fertile soils of the high-latitude, developed northern countries (North America and Europe) and the highly weathered, infertile soils of the humid tropics. For example, in the southern hemisphere, there is no land at the high latitudes that corresponds with that found in the rich countries of the north.

More than 80% of South Africa is dominated by very shallow soils. These include the country's main wheat producing areas in the Western Cape. A combination of two factors, viz. hard rock parent material and low and insufficient rainfall, is mainly responsible for the predominance of these shallow soils. Other large areas of South Africa are dominated by deep aeolian (wind-borne) sandy soils. These include major parts of the areas where approximately 75% of the country's maize is produced, viz. the Free State and North West provinces. These sandy soils are inherently much less fertile than the deep finer textured American and European soils that are of wind-borne origin.

Unfortunately, relatively large areas of South Africa with adequate rain are dominated by extremely poor quality, highly erodible duplex soils that have developed from mudstones and shales. The fact that the worst of these soils are red has led to major planning errors, also in irrigation planning, owing to the fact that red soils are usually regarded as good Hutton soils. To aggravate the confusion, the soils often occur interspersed with excellent red soils that have developed from dolerite.

The only significant areas of moderate to high-potential soils in South Africa are found in the higher rainfall, humid to subhumid areas in the east. This is logical, owing to the fact that these areas have sufficient water for weathering of rocks and soil formation.

On larger irrigation schemes soils without limitations for irrigation are limited in extent. On some schemes, e.g. Vaalharts and along the Fish River, less than 10% of the soils are highly suitable for irrigation and on most other schemes these seldom exceed 30 to 40% of the area. Therefore most irrigation in South Africa is practised on suboptimal to marginal soils that require high levels of management skills. Some small-farmer irrigation schemes in the former homelands, however, are dominated by excellent irrigable soils, e.g. Dzindi, Ncora and Keiskammahoek.

Vegetation

Only 13% of South Africa's land is arable. This means that 87% of the land is suitable for natural forests, afforestation, nature reserves and/or extensive livestock farming (including game farming) on natural rangeland. Most of this area is used for livestock farming.

Also, the biggest proportion of South Africa's rangelands is in areas with low to extremely low rainfall and low-potential shallow soils or highly erodible soils. The main areas that fall in this category include the entire Karoo, Little Karoo, Bushmanland and Namaqualand. Owing to the combination of low rainfall and soils with low potential, the vegetation production capacities, and therefore the livestock carrying capacities of these areas are extremely low. In some of the areas the vegetation production potential is less than 1 t/ha/year. In general both the palatability and nutritional value of the vegetation in dry areas are high, provided the rangeland is in good condition. The combination of high palatability and low production potential makes these rangelands very vulnerable to overgrazing and degradation.

The eastern part of the Kgalagadi and almost all of Limpopo Province, except the higher rainfall areas on the escarpment and in mountains, are covered by relatively dry open savanna. Although the vegetation production potential of the dry savanna areas is lower than that of the moist savanna areas, the carrying capacity per hectare of the dry savanna is about double that of the moist savanna, which is found in the Mpumalanga Lowveld and a narrow coastal strip along the east coast, owing to the much lower nutritional value of the vegetation in the moist savanna, that grows on more highly weathered and leached, and therefore less fertile soils. It is, however, very risky to generalise when planning is done in the dry savanna area, owing to the vast differences with regard to vegetation production potential and the nutritional value of the vegetation between various soils on different geologies.

THE CONDITION AND CONSERVATION STATUS OF SOUTH AFRICA'S RANGELAND AND SOIL RESOURCES

Vegetation

Most of South Africa's rangelands are in a moderate to severely degraded condition. The degree of degradation differs markedly between different regions. The rangelands of the arid areas (Karoo, Bushmanland, Kgalagadi, far northern part of Limpopo Province) are most degraded. There is major concern regarding the degradation of the potentially productive, very high quality, but ecologically sensitive, sweetveld grassland and dry open savanna areas. Owing to the high palatability and nutritional value, these vegetation types are easily prone to overgrazing, which is aggravated by the periodic droughts experienced in these semiarid areas. An important aspect of the rangelands of the arid and semiarid areas is the low resilience (recovery potential) of the major proportion of these rangelands once they are degraded. This is largely related to the properties and characteristics of the dominant soils of these rangelands.

Some of the most widespread and most harmful types of rangeland degradation include:

- Reduction in basal cover. A dense basal cover by perennial grasses is the most favourable situation in terms of both fodder production and prevention of erosion, especially sheet erosion of topsoil. Reduction in basal cover is very harmful in both these respects. It is most conspicuous in large bare patches that do not recover owing to soil surface sealing and/or removal of topsoil. More widespread, but less conspicuous to many people, and therefore more hazardous, are the vast reductions in basal cover where grasses have been replaced by shrubs or bush, with resultant, often unnoticed, widespread topsoil removal by sheet erosion.
- Bush encroachment and densification. A few million hectares of dry savanna and sweetveld grassland have been degraded severely by serious bush encroachment and densification. This has resulted in a dramatic reduction in the grazing capacity and the development of bare soil surface areas between the shrubs and bushes, leading to severe sheet, and often also gully erosion. Examples are sweet thorn invasion in grasslands in the Eastern Cape and other areas, blackthorn invasion in the Kgalagadi and sicklebush invasion in the western Limpopo Province.

Unfavourable changes in the composition of the grass components of vegetation. Replacement of perennial
grasses with annuals lowers the quantity of material produced, renders production less stable, increases runoff
and erosion, and jeopardises recovery after droughts.

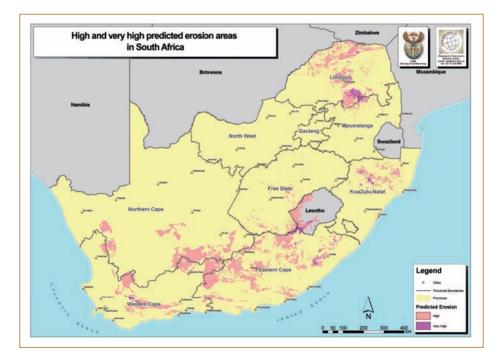

Soil

Water erosion has been described as the major environmental problem in South Africa. It is estimated that the country has lost 25% of its topsoil during the 20th century owing to water erosion. In some areas the rates of soil loss have dropped dramatically owing to the fact that virtually all erodible material has been removed and there is little or nothing left to be eroded.

Water erosion is severe and extensive in both cropland and rangeland. In cropland inappropriate farming practices play a role, however, the most serious cases are where non-arable soils that are extremely vulnerable to erosion have been cultivated. An extreme example is the vast erosion in cultivated areas in the "betterment schemes" or "rehabilitated" areas in the former homelands, where planners often sited fields for cultivation on extremely highly erodible non-arable soils. These soils have been abandoned long ago and recovery is very limited. Many such areas carried some of the country's best rangeland, but these have for all practical purposes been destroyed permanently. In addition, rangeland used for extensive grazing has undergone severe erosion owing to the removal of the protective permanent basal cover and poor management.

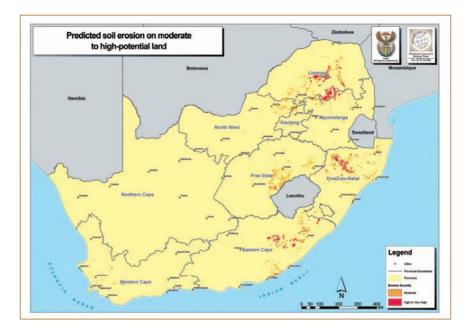

Although it is generally accepted that soil erosion is a serious soil degradation process within South Africa, to date no detailed national quantitative data are available to describe the type, spatial limits, severity and trend of soil erosion in South Africa.

The best available data on the extent of soil erosion by water was derived through a GIS modelling process using the revised universal soil loss equation (RUSLE) and the long-term NOAA satellite data. The map below indicates areas subjected to high and very high erosion risks as derived from above-mentioned model.

There is an urgent need for short-term efforts to be focused on the protection of moderate to high-potential agricultural land subjected to a high erosion risk. The following map indicates the spatial location of these areas and the table indicates the extent of predicted severe soil erosion on moderate to high-potential agricultural land per province.

The predicted soil erosion map and table indicate clearly that the Eastern Cape, KwaZulu-Natal and Limpopo provinces are the most affected by soil erosion on high-potential agricultural land. The extent of areas subjected to high erosion risk on moderate to high-potential agricultural land for the three provinces is approximately 859 500 ha.

Predicted soil erosion on moderate to high-potential agricultural land

Ducuinas	Soil erosion on moderate to high-potential agricultural land			
Province	[A] Moderate (ha)	[B] High to very high (ha)	[A] + [B] (ha)	High to very high (%)
Gauteng	69 000	4 000	73 000	0,24
Eastern Cape	312 500	227 000	539 500	1,34
Free State	476 000	40 500	516 500	0,31
KwaZulu-Natal	441 500	226 000	667 500	2,45
Limpopo	499 500	406 500	906 000	3,31
Mpumalanga	166 000	65 000	231 000	0,82
North West	210 500	6 000	216 500	0,05
Northern Cape	0	0	0	0,00
Western Cape	49 000	11 000	60 000	0,08
Total for SA	2 224 000	986 000	3 210 000	8,60

It is estimated that 25% of the land area in South Africa is covered by soils that are also potentially highly susceptible to wind erosion. These include the sandy soils in the western half of the "maize quadrangle" in the North West Province and northwestern Free State, the areas that produce 75% of the country's maize.

South African soils are extremely prone to serious soil compaction, particularly under intensive mechanised cultivated agriculture, both dryland and irrigated. This is a problem experienced throughout the country and much more widespread and severe than the global norm.

Large areas of South Africa are covered by soils that are extremely prone to severe crusting (surface sealing). The extent of crusting, as well as its awareness, has increased dramatically during the last two decades. Switching to overhead and micro-irrigation systems and the widespread problems associated with these on crusting-prone soils greatly contributed to this.

Human-induced soil acidification is also a major problem in South Africa. Its impact is severe, as it affects the scarce, arable land, especially high-potential land. More than 5 million ha of cultivated lands have already been severely acidified, mainly as a result of injudicious fertiliser practices and inadequate lime applications. In the high-potential areas of Mpumalanga opencast and strip coalmining also contribute to soil acidification.

Soil fertility degradation is a matter for concern. In commercial agriculture there has been a tendency of "nutrient capital building" for some nutrients, especially phosphorus and zinc. In some cases phosphorus has, unfortunately even been built up to excessive levels, where it starts to reduce yields. Statistics for the last 20 years indicate that trends in P levels for this key nutrient follow two opposite directions: In a significant proportion of commercial croplands P levels are declining from adequate to deficient, whereas in other cases it is still being increased from adequate to excessive levels, owing to over-fertilisation.

Mission statement

VISION

The vision of the Department of Agriculture is that of a united and prosperous agricultural sector.

MISSION

The Department of Agriculture aims to lead and support sustainable agriculture and promote rural development through:

- · Ensuring access to sufficient, safe and nutritious food
- · Eliminating skewed participation and inequity in the sector
- · Maximising growth, employment and income in agriculture
- · Enhancing the sustainable management of natural agricultural resources and ecological systems
- Ensuring effective and efficient governance
- · Ensuring knowledge and information management

OBJECTIVES

To fulfil its mandate and meet its commitment to the national strategy for agricultural development, the department has set the following as its medium-term strategic objectives:

- · Guide and support equitable access to resources for agricultural development
- Enhance the economic performance of the sector
- Ensure sustainable natural resource management and use
- Promote and support the participation of black people, women, youth and the disabled in agriculture
- · Ensure consumer confidence in agricultural products and services
- Achieve departmental service excellence

DEPARTMENTAL VALUES

The departmental values are underpinned by the ethos of "Vuk'uzenzele". This concept builds on the meaning of the word through its direct interpretation of "selfreliance" in capturing the spirit of South Africans at home and in foreign countries, expressed by President Mbeki in his State of the Nation Address in 2002, as people who want to "lend a hand in the national effort to build a better life".

Recognising that being in the public service is indeed already a privilege to be able to serve the nation and having adopted the principles of Batho Pele—the challenge is now to respond comprehensively to the call for action. The departmental values that support the above context are therefore:

Bambanani	We believe that the sum of our collective efforts will and should be greater than the total of our indi-
	vidual efforts.

- **Drive** We are purposeful and energised in all that we do.
- **Excellence** We are committed to exceeding our customers' expectations for quality, responsiveness and professional excellence.
- **Innovation** We motivate and reward creativity, innovation and new knowledge generation that support outstanding performance.
- Integrity We maintain the highest standards of ethical behaviour, honesty and professional integrity.
- Maak 'n plan We always will find a way to make it happen.

The departmental management is committed to ensuring the creation of an environment within which all the staff members can live through these values.

KEY CLIENTS

The key clients of the department are:

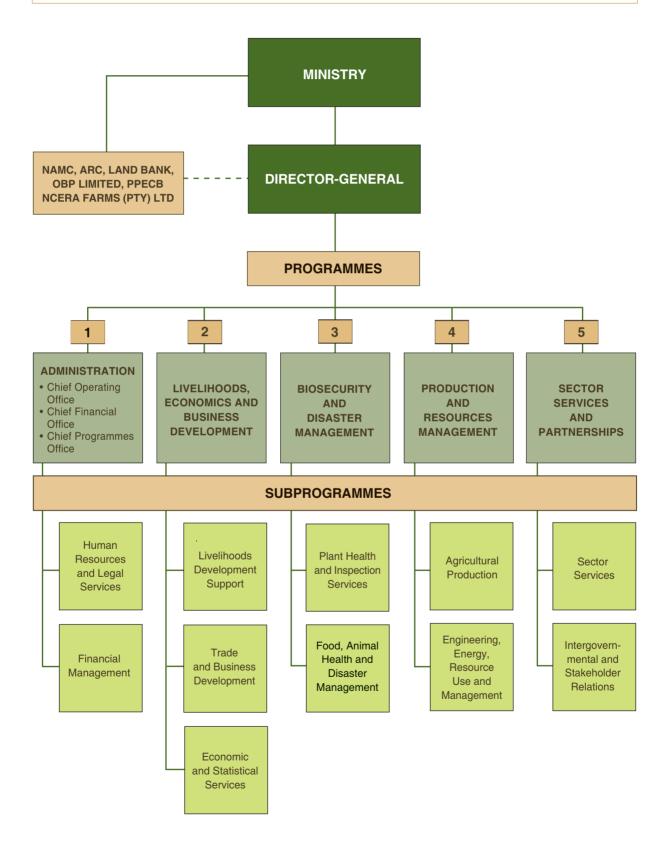

- Provincial departments of agriculture
- Public entities working in the agricultural sector
- Consumers of agricultural products
- · Processors, traders and exporters of agricultural products
- Producers of agricultural products
- Agricultural services providers
- International organisations working in agriculture

KEY PRODUCTS AND SERVICES

The key products and services of the department are:

National leadership	In terms of policy, legislation, setting strategic priorities, advice, norms and standards, information, monitoring and evaluation, supervision and reporting
National regulatory services	With respect to national legislation, regulations, controls, auditing services and inspection services
National co-ordination services	Facilitate provincial and public entities co-ordination, international agree- ments, professional networks, public, private, community partnerships and agricultural human resource development
National agricultural risk management	Manage early warning systems, disaster management policy, response, recovery, mitigation and preparedness, pest control and plant and diseases control

Organisational structure

LEGISLATIVE MANDATE

The department derives its core mandate from Section 27(1)(b) of the Constitution. It is currently responsible for over 30 pieces of legislation. Underpinning this definition of the scope of the mandate of the Department of Agriculture is the understanding of agriculture, as being inclusive of all economic activities, from the provision of farming inputs, farming to adding value. In view of the reality that the agricultural sector is continuously subjected to changes in the production and marketing environment, the policy and legislative environment that governs the sector has to adjust continuously through amendments and sometimes replacement of legislation.

The following list of Acts reflects and further elaborates the legislative mandate of the DoA:

Performing Animals Protection Act, 1935	(Act No. 24 of 1935)
Fertilizers, Farm Feeds, Agricultural Remedies and Stock Remedies Act, 1947	(Act No. 36 of 1947)
Animal Protection Act, 1962	(Act No. 71 of 1962)
Fencing Act, 1963	(Act No. 31 of 1963)
Subdivision of Agricultural Land Act, 1970	(Act No. 70 of 1970)
Plant Breeders' Rights Act, 1976	(Act No. 15 of 1976)
Plant Improvement Act, 1976	(Act No. 53 of 1976)
Veterinary and Para-veterinary Professions Act, 1982	(Act No. 19 of 1982)
Perishable Products Export Control Act, 1983	(Act No. 9 of 1983)
Agricultural Pests Act, 1983	(Act No. 36 of 1983)
Conservation of Agricultural Resources Act, 1983	(Act No. 43 of 1983)
Animal Diseases Act, 1984	(Act No. 35 of 1984)
Liquor Products Act, 1989	(Act No. 60 of 1989)
Agricultural Research Act, 1990	(Act No. 86 of 1990)
Agricultural Product Standards Act, 1990	(Act No. 119 of 1990)
Agricultural Produce Agents Act, 1992	(Act No. 12 of 1992)
Groot Constantia Trust Act, 1993	(Act No. 58 of 1993)
Societies for the Prevention of Cruelty to Animals Act, 1993	(Act No. 169 of 1993)
Marketing of Agricultural Products Act, 1996	(Act No. 47 of 1996)
Agriculture Laws Extension Act, 1996	(Act No. 87 of 1996)
Genetically Modified Organisms Act, 1997	(Act No. 15 of 1997)
Animal Improvement Act, 1998	(Act No. 62 of 1998)
Agricultural Laws Rationalisation Act, 1998	(Act No. 72 of 1998)
Onderstepoort Biological Products Incorporation Act, 1999	(Act No. 19 of 1999)
Meat Safety Act, 2000	(Act No. 40 of 2000)
Agricultural Debt Management Act, 2001	(Act No. 45 of 2001)
Animal Identification Act, 2002	(Act No. 6 of 2002)
Land and Agricultural Development Bank Act, 2002	(Act No. 15 of 2002)
KwaZulu Cane Growers' Association Act Repeal Act, 2002	(Act No. 24 of 2002)
South African Abattoir Corporation Repeal Act, 2005	(Act No. 17 of 2005)

LEGISLATIVE PROGRAMME FOR 2006

The following are the Bills we intend to table in Parliament for deliberations during the 2006 Legislative Programme.

Liquor Products Amendment Bill

The objectives of the Bill are to provide for the reconstitution and renaming of the Wine and Spirit Board and to limit its area of responsibility to: meeting traceability requirements such as compulsory particulars on containers of liquor products; complying with the Republic's international obligations on the Wine and Spirit Agreement between the European Union and South Africa; and provide authority to outsource export control and to ensure compatibility with the Constitution.

Pounds Bill

The objectives of the Bill are to consolidate and amend the law relating to pounds and the impounding of animals found trespassing on land; so as to provide for the establishment, erection and control of pounds; the appointment, powers, duties and functions of pound masters; the impoundment, safekeeping and disposal of impounded animals. The intention is to create uniformity concerning the Pounds Bill in the Republic.

Sustainable Utilisation of Agricultural Resources Bill

This Bill is intended to promote the best utilisation, management and conservation of natural agricultural resources for the optimum productivity and sustainable development.

It will further provide for the sustainable utilisation of natural agricultural resources, in support of biodiversity and the combating of desertification, and for that purpose to provide for the designation and functions of an executive officer, the establishment of sustainable utilisation of agricultural resource committees and an advisory board, the prescribing of standards and control measures, the establishment of incentive programmes, control over the spreading of weeds, invader plants and bush encroachers, and control over the utilisation and subdivision of agricultural land.

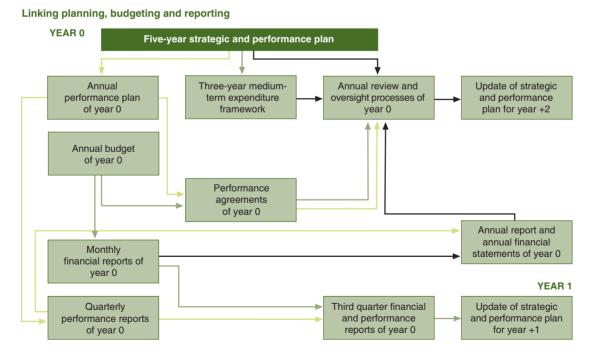

Genetically Modified Organisms Amendment Bill

The Bill is currently in Parliament. This Bill intends to amend the Genetically Modified Organisms Act, 1997. The amendment will give effect to the International Agreements pertaining to genetically modified organisms to which South Africa is a party. It will further amend the composition and remunerations of the members of the committee and council, amplify the powers and duties of the council and the committee and the functions of the Registrar. It will clarify procedures relating to the application and issuing of permits and provide for risk assessments and liability determination. It will provide for certain procedures during an appeal process.

Public hearings have been held and after deliberations by the Portfolio Committee, the Bill will be tabled in the National Council of Provinces for further deliberations.

OVERVIEW OF THE DEPARTMENTAL PLANNING PROCESS

The department follows a government-wide system of planning, budgeting and reporting as illustrated below.

The department participates actively in all government cluster programmes to ensure that departmental programmes are aligned to broad government policies. The department participates in strategy formulation and priority setting for the entire government within the following Directors-General clusters:

- Economic and employment
- International relations, peace and security
- Governance

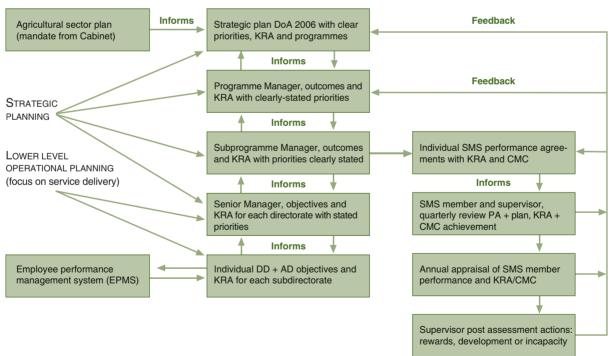

The following steps outline the departmental planning process:

Social

Step 1	In August, the department commences with its strategic planning process, undertakes an environ- mental scan and reviews its KRAs, key objectives and key priorities. These are submitted to the relevant clusters.
Step 2	The cluster committee assesses departmental submissions and develops cluster relevant objectives and indicators that emphasise integration and coordination. These are then assessed, prioritised and presented in a revised set of cluster level objectives and indicators by the DGs. The priorities are then sent to the Forum of South African Directors-General (FOSAD) Manco.
Step 3	The FOSAD completes a draft Medium Term Strategic Framework (MTSF) by 15 December.
Step 4	During the Cabinet Lekgotla of January the draft MTSF is tabled and discussed. The framework serves as a guide for DGs in individual government departments for reviewing plans.
Step 5	In February the entire medium to long-term priorities are communicated to the nation through the State of the Nation Address (SONA).
Steps 6 and 7	During February and March the priorities are communicated to all spheres of government. The Min- ister and the DG also ensure that these priorities are cascaded to, and understood by all depart- mental staff.
Step 8	The department now undertakes detailed planning and budgeting to ensure that resources are allo- cated to the priorities outlined in the SONA. This process has to be completed by end of March.
Step 9	At the July Lekgotla, current needs are identified and reviewed, making possible planning for the next phase of the MTSF period.

Once the strategic priorities have been communicated, the DoA commences with its internal planning process using the various forms available to the department for planning and reporting purposes.

KEY RESULT AREAS AND KEY OBJECTIVES

Through its strategic planning processes, the department has developed the following KRAs and key objectives for the 2006 to 2009 MTEF aligned to the electoral cycle:

KRA1: Ensuring access to sufficient, safe and nutritious food

Key objectives

- · Establish and maintain effective early warning and mitigation systems in agriculture
- · Promote production, processing and consumption of nutritious alternative foods
- · Promote and support household income generation and food production
- · Provide leadership in the implementation of the Integrated Food Security and Nutrition Strategy

KRA 2: Eliminating skewed participation and inequity in the sector

Key objectives

- Increase access to existing resources and opportunities within the agricultural sector for historically disadvantaged groups and individuals
- · Ensure equitable access and sustained participation in the sector
- Ensure increased black economic empowerment
- · Improve social and working conditions in the sector

KRA 3: Optimising growth, remunerative job opportunities and income in agriculture

Key objectives

- · Increase agricultural productivity and profitability in South Africa, SADC and Africa
- · Increase market access for South Africa and African agricultural products, domestically and internationally
- · Increase remunerative opportunities in the agricultural supply chain
- Increase the level of public investment for agricultural development
- · Reduce the levels of risks associated with diseases, pests and natural disasters

KRA 4: Enhancing the sustainable management of natural agricultural resources and ecological systems

Key objectives

- Alignment of policy and legislation with the principles (economic, social and environmental sustainability) of sustainable development
- · Ensure the management of agricultural indigenous genetic resources, land and water

KRA 5: Ensuring efficient and effective governance

Key objectives

- · Implement the South African Excellence Model (SAEM) and other quality standards in the department
- · Inculcate a culture of ownership, compliance and accountability to government policies and principles
- · Effectively manage risks
- · Promote and protect South African agricultural interests internationally

KRA 6: Ensuring knowledge and information management

Key objectives

- Develop a strategy and a structured plan for internal and external communication, as well as information management
- Provide a national framework for agricultural research, transfer of technology and education and training in the sector
- Improve knowledge management in the department
- Ensure consumer confidence in agricultural products and services

The priority setting process is further influenced by the annual SONA by the President, as well as the Minister's Annual Budget Speech. The following are the sector's priority programmes for the period 2006 to 2009 as approved by both ITCA and MinMec, and confirmed by the department at its strategic planning sessions.

Comprehensive Agriculture Support Programme (CASP)

During its initial stages it was decided that the provincial departments of agriculture (PDAs), as implementing agents, would focus on the provision of infrastructure. It became clear, however, that in order to achieve visible in-

tended results it was necessary that a full roll-out of the programme be undertaken. It also became evident that the PDAs were facing capacity constraints. As the delivery of agricultural support is dependent on the capacity of PDAs, the lack thereof retarded the programme's progress, resulting in significant under- spending and rolling over of funds. A set of recommendations was made in order to improve service delivery. This set includes the review of grant conditions, business processes relating to the identification of projects, business plans and time-frames for reporting and approval of projects.

Micro-Agricultural Financial Institutions of South Africa (Mafisa)

The scheme was launched in the Limpopo, Eastern Cape and KwaZulu-Natal provinces and will be rolled out to other provinces. Steering committees of the provinces will be responsible for facilitating implementation.

The core products for Mafisa are short-term production inputs. It also incorporates an element of facilitation of savings mobilisation that will be offered through the Post Bank and Financial Services Co-operatives. Other institutions that will be participating in the scheme as financial intermediaries include the Land Bank branches, uVimba Finance in the Eastern Cape, Ithala Development Finance Corporation in KwaZulu-Natal, LimDev in Limpopo and Mpumalanga Agricultural Development Co-operation. These institutions will first undergo an accreditation process to determine their outreach capacity.

Broad-Based Black Economic Empowerment Framework for Agriculture (AgriBEE)

The AgriBEE framework is the department's response to improving equitable access to and participation in agricultural opportunities, deracialising land and enterprise ownership, and unlocking the entrepreneurial potential in the sector. The framework was developed in collaboration with agricultural stakeholders. Upon the signing of the Agriculture Sector Charter all initiatives will become fully operational and proposed AgriBEE systems will be implemented.

Testing of business models is in progress with selected commodity groups and local development organisations working on how best to integrate emerging participants into the mainstream agriculture by exploring linkages with the established agriculture agents.

A process is in place for the implementation of evaluation and monitoring systems for benchmarking and reviewing of broad-based BEE activities within the sector.

Several national, provincial, regional and local municipal level workshops will take place to address issues relating to the implementation and monitoring of AgriBEE. Training workshops that are aimed at promoting awareness, understanding and contextualisation of the impact and relevance of broad-based BEE on local municipality delivery levels and how it will contribute to an inclusive agricultural sector will be undertaken by the selected service providers.

African Agricultural Development Programme (AADP)

The underlying principle for engagement in Africa is that regional stability and the sustainable development of the economies of the African countries are in the interest of the entire continent. Given the increased and overwhelming demand by individual African countries for technical assistance support in the field of agriculture from South Africa, it has been decided that these requests can no longer be managed through the normal bilateral arrangements but rather through a dedicated Technical Assistance Programme (TAP), namely the AADP. An investment by South Africa in the form of a TAP is seen as an important enabler for regional development, which has the potential for long-term benefits for South Africa and implementation of the international priorities determined by Cabinet.

Accelerated and Shared Growth Initiative (ASGI)

In October 2005, it was decided that the department would, as a contribution towards the ASGI, develop detailed business plans for identified ASGI projects. Five key areas, in which its contribution can be maximised, have been identified and these include livestock development, establishment of new and rehabilitation of existing irrigation schemes, biofuels, land rehabilitation and the development of agricultural development corridors.

SERVICE DELIVERY PERFORMANCE

The DoA, in collaboration with the PDAs, has identified strategic objectives and performance measures against the key priorities for the 2006 to 2009 medium term period as outlined in the table below. These should be viewed as work in progress as they are subject to refinement with application. (See page 30 for definitions of performance measures against key priorities.)

Definitions of performance measures, against key priorities

KRA	Strategic objective	Priority	Goal	Measure	Define measure	Monitoring mechanism and information source
					(net income per farmer or farming unit as well as gross farming income per hectare). An index of the aggregate volume of agricultural produc- tion is a value-weighted index. This index can be established for aggregates such as SADC and all of Africa, for main agricultural categories such as grains and livestock.	For SADC and Africa, establishing an accurate time series of these will be extremely difficult. It is therefore suggested that the production index be used instead. This can be obtained from the FAO agricultural database, including aggregated indices for SADC, Africa, and sub-Saharan Africa.
					The monitoring of agricultural productivity can be done using basic quantitative techniques, of which the obvious one is the Tornquist-Theli index of total factor productivity. This index can, in turn, be related to various interventions or trends by means of parametric or non- parametric methods.	Agricultural productivity trends can be established based on aggregate input and output data that the DoA already collects in the course of com- piling the <i>Abstract of agricul-</i> <i>tural statistics</i> . However, for the rest of Africa, data can be very time-consuming to assemble. The best single source is undoubtedly the FAO, all of which can be accessed via the internet, however, the quality is variable, especially for inputs. Treatment of capital inputs
					Employment must include both trends in permanent/regular agricultural employment and casual/seasonal/contractual employment, measured in the number of employment opportunities per year.	Agricultural employment is best followed using the <i>Labour force</i> <i>survey</i> , mindful of the fact that due to large year-on-year fluctuations, trends in agricul- tural employment take a while to establish. Also, the LFS has shortcomings when it comes to measuring seasonal employ- ment, which must be acknowl- edged even if they cannot be fully remedied. Stats SA should

KRA	Strategic objective	Priority	Goal	Measure	Define measure	Monitoring mechanism and information source
						include a module in the LFS that monitors employment opportunities in the agricultural sector.
		AADP	Promote agricultural growth, rural development and food security in the African region	% increase in effective training and technical support to African countries by 2010	Inflation-adjusted expenditure on training and number of people trained in order to determine value for money and technical support to other Afri- can countries and multicountry organisations (e.g. NEPAD).	This information should be readily available to both International Relations and Financial Management.
				% increase in agricultural trade between SA and other African countries by 2010	The level and trends in agricultural trade with specific trading partners are best sum- marised by inflation-adjusted financial aggregates, i.e. imports, exports and net exports.	Data on agricultural trade is collated by Agricultural Statis- tics on a regular basis. The data ultimately originate with Customs and Excise. This type of analysis is done routinely by International Trade.
KRA 4: Enhancing the sustainable management of natural agricultural resources and ecological systems	Ensure the management of the agricultural indigenous genetic resources, land and water	Natural Resource Management	Promote the sustainable management of agricultural land and water resources in agriculture	Extent of the improvement in the quality of land and water resources by 2010	The indicators for this KRA cannot at present be identified or defined. This is so for two reasons: first, because the systems by which land and water quality will be monitored are still being developed (see next column); and second, because at this stage it does not appear that water or land quality are annable to basic, nationally representative summary measures. The status of this KRA will probably have to be summarised by a basic quality improved/ stayed same/deteriorated") backed up by detailed data and rigorous analysis.	The DoA is busy establishing three monitoring systems to track agricultural resource quality, namely a point monitoring system for land, a point monitoring system to track the quality of groundwa- ter, and a system to measure sediment load and other concerns relating to rivers. There are already various satellite imagery-based systems for ascertaining land degradation (one operated by the CSIR, and two by the ARC), the limited accuracy of which will be enhanced by the "ground-truthing" that the point monitoring systems will enable.

HUMAN CAPITAL DEVELOPMENT

The need to broaden access to agricultural education and training was identified in 1994. Attempts were made to transform and restructure the previous dual agricultural education and training system to give previously excluded groups of the population access to quality education. To transform the system, several legislative frameworks such as the Higher Education Act, 1997 (Act No. 101 of 1997), the Further Education and Training Act, 1998 (Act No. 88 of 1998), the Skills Development Act, 1998 (Act No. 97 of 1998), the Skills Development Levies Act, 1999 (Act No. 97 of 1999, the National Human Resource Development and National Skills Development strategies were promulgated. On 30 September 2005 the Minister for Agriculture and Land Affairs launched an Agricultural Education and Training strategy for Agriculture and Rural Development in South Africa, known as the AET strategy. The AET strategy seeks to address three strategic issues namely: the development and maintenance of an effective and well-coordinated AET that is integrated at all levels and responds appropriately to South African Agriculture; enhancing equitable access and meaningful participation in AET for all South Africans and ensuring the application of effective quality assurance of AET at all levels.

Over the next 5 years the DoA through the AET strategy will, among other things, create a National Education and Training Forum, ensure that policy and curriculum development are co-ordinated and harmonised, ensure that AET learning is mobile and transferable from one AET institution to another and articulates with hierarchies of AET qualifications, ensure alignment of AET curricula with urgent challenges facing South African Agriculture to include: sustainable development and land care, food security and water harvesting and rural wealth creation. Other crucial challenges that will be addressed through the AET strategy include the removal of all barriers that prevent or limit access to AET, improve the image of agriculture as a career or livelihood choice, encourage further studies (Masters and Ph.D.) of the agricultural sciences (especially of critical skills in short supply) to produce highly-qualified scientists and extend the agricultural science knowledge base. The major crucial challenge that will face the successful implementation of the AET strategy is ensuring that it is accredited and resourced at all levels, with the appropriate number of teachers and trainers with relevant skills.

While it is crucial to look ahead it is equally important to examine the current state of human capital development in the agricultural sector in terms of assessment of the skills levels of employees as well as the supply of agriculturerelated postmatric qualifications in the sector.

Current status

Education levels of people employed in the agricultural sector

Disparities in the level of education among people employed in the agricultural sector by population group are presented in the table below.

Levels of education	African	Coloured	Asian	White
Matric and higher	2	2	35	77
Lower than matric	57	75	58	22
No schooling	41	23	7	1
Total	100	100	100	100

Education level of employees in the sector

From the table it appears that 41% of Africans and 23% of coloureds have no schooling, whereas among whites up to 77% employed in the sector obtained matric and higher qualifications. As from 2005, we have seen acceleration in terms of ABET enrolments in the agricultural sector, triggered by the Minister's draft AgriBEE framework which led to the enrolment of more than 15 000 workers by the end of 2005. This number is likely to double in 2006 as a result of the DoA ABET training programme which will run in partnership with the AgriSETA.

Assessment of agriculture-related postmatric enrolments at higher education institutions (excluding colleges of agriculture) over a five-year period: 1999 to 2003

The data in the table on page 34 indicate that more students enrolled at technikons compared to universities over the period under assessment. In terms of number of enrolments there has been a nominal increase each year, except in 2002. The information on enrolments is further depicted by means of graphs following the table.

	Universities			Technikons	(now univers	ities)	Total		
Year	Agricul- ture enrolment	Total enrolment	% of total enrolment	Agricul- ture enrolment	Total enrolment	% of total enrolment	Agricul- ture enrolment	Total enrolment	% of total
1999	3 013	356 818	0,84	4 683	197 646	2,37	7 696	554 464	1,39
2000	3 411	387 361	0,88	5 258	202 792	2,59	8 669	590 153	1,47
2001	4 242	428 094	0,99	6 346	224 327	2,83	10 588	652 421	1,62
2002	4 223	460 470	0,92	6 125	214 690	2,85	10 348	675 160	1,53
2003	4 558	487 741	0.93	6 638	230 052	2.89	11 196	717 793	1,56

Comparison of headcount number of students enrolled in agriculture renewable resources at universities and technikons compared to total enrolment in each institutional type: 1999 to 2003

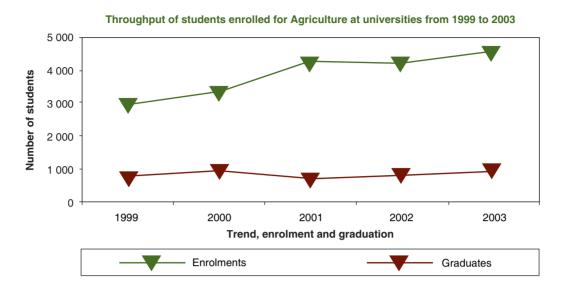

From the graphs it is clear that the number of students enrolling for agriculture is increasing every year.

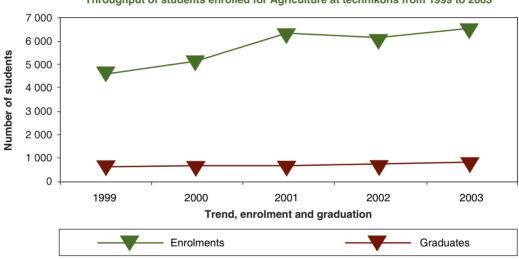

Assessment of agriculture-related postmatric graduation at higher education institutions (excluding colleges of agriculture) over a period of 5 years 1999 to 2003

The assessment compared universities and technikons separately and it focuses on measuring the throughput of students registered for Agriculture and Renewable Resources. The information is presented in the two graphs on page 35.

From the graph above it is evident that although enrolment at universities averaged at 3 889, the number of graduates per annum is 824 over the same period. This represents an average throughput rate of 21,2%.

In the case of technikons the average number of student enrolments over the 5 years is 5 810, while the average number of students graduated is 725. This represents an average of 12,5%.

Throughput of students enrolled for Agriculture at technikons from 1999 to 2003

Overall, the throughput rate of students enrolled at universities ranged from 25% in 1999 to 20% in 2003. In terms of the technikons the throughput over the period under assessment has remained constant at 13%. In comparison, universities had a better throughput rate than technikons.

Throughput of students enrolled for agriculture renewable resources has been higher than the national average of 15% over the same period.

College of agriculture education

Colleges of agriculture education is regarded as relevant in the training of farmers and technicians who are required to establish and support an emerging agricultural business sector. By 2004 a total of 11 out of 12 colleges had been offering a wide range of training programmes, ranging from an NQF 1 Certificate in Agriculture to a Diploma in Agriculture. Areas of specialisation included Animal Production, Plant Production, Agribusiness, Home Economics, Cellar Technology, Community Extension and Resource Utilisation.

Overall, colleges of agriculture have a higher average throughput rate compared to universities and technikons. Generally, enrolments at colleges of agriculture are low compared to the level of government investment. In the next 5–10 years colleges will need to be positioned to respond adequately to the DoA priority programmes, particularly AgriBEE and CASP, given the numbers of agrarian and land reform beneficiaries who are, and will be, benefiting from these programmes. Both the academics and students at colleges will have to be equipped with skills to operate farming and other agricultural ventures as project making centres.

DoA intervention strategies

The DoA has introduced a number of strategies and schemes to advance human capital development in the sector. These strategies include the External Bursary Scheme for Scarce and Critically Scarce Skills in Agriculture, the International Training programme, the Experiential and Internship programme, the Agri-industry Development programme, the Master Mentorship and Mentorship Development programme and Adult Basic Education and Training to increase the levels of functional literacy and numeracy in the sector over the next 5–10 years.

Agricultural governance

STRENGTHENING INTERGOVERNMENTAL RELATIONS

The agricultural sector continues to consolidate integrated governance under the auspices of a MinMec supported by its technical support committee, the Intergovernmental Technical Committee on Agriculture (ITCA), putting into effect the principles enshrined in the Constitution of the Republic of South Africa, 1996, as well as the Intergovernmental Relations Framework Act. These efforts are yielding positive results, including better information sharing between the spheres of Government as well as increasing the ability of the national Government to assist provincial Government in executing its functions. As part of this consolidation, the sector will during the 2006/07 financial year be implementing the harmonisation of evaluation of jobs that are critical to the sector's performance. This exercise will go a long way in addressing the capacity of the State to deliver government services within agriculture.

In responding to the growth initiatives of the country (ASGI-SA), the department has established an Agriculture Sector CEOs Forum. This forum will focus its efforts on evaluating strategies intended to assist the sector in playing its vital role in economic growth, poverty alleviation and job creation.

DoA's budget and budget trends (2003-2006)

Budget allocations to the department reflect a steady increase during the last four-year period. The department has engaged extensively in cost driving programmes over this period, including international engagements (Africa and the world) to ensure that our sector benefits from good farming practices in Africa and the world as well as the opening-up of the market for agricultural products. It is envisaged that this trend will continue with great emphasis on implementation of CAADP. Another spending pressure going forward would be the stepping up of post settlement support for land-reform beneficiaries through the CASP.

Item per economic classification	2003/04 R million	2004/05 R million	2005/06 R million	2006/07 R million
Compensation of employees	276 596	354 969	420 098	469 675
Goods and services	233 541	290 387	370 591	412 527
Payment for capital assets	33 908	47 076	29 056	33 059
Transfers and subsidies	633 245	756 959	864 993	1 042 387
Total	1 177 290	1 449 391	1 684 738	1 957 648

KNOWLEDGE AND INFORMATION MANAGEMENT SYSTEMS (KIMS) FOR SERVICE DELIVERY

The department still regards KIMS as the key enabler in the quest for efficient and effective operations, both within the department as well as within the entire agricultural sector. The department will continue to strengthen its KIMS in order to support policy and strategy implementation. Deliberate investment in resources in building these systems will be made in order for the entire organisation, together with its provincial counterparts, to realise the benefits of investing in knowledge systems.

Value added services within the department's knowledge portal continue to increase, with the broader community within the organisation starting to use the resource more productively. The department has also maintained its active participation in the Batho-Pele Gateway project. As planning begins for the rolling-out of the second phase of the project, the challenge will be to evaluate back-end business processes in order to ensure that these respond to the advanced nature of this new phase.

The AGIS, developed by the department over the last number of years, remains an important information resource for departmental clients, especially the farming community. The department continues to upgrade this system with more valuable information, including market information that is being overlaid and mapped onto existing data in order to support our clients in their ongoing business activities.

STATUS OF EMPLOYMENT EQUITY AND TRANSFORMATION

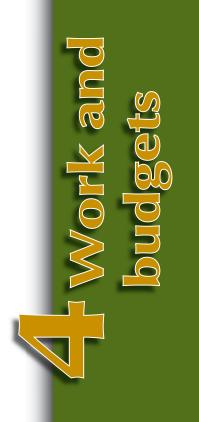

The department is cognisant of the 2005 Cabinet resolution on the representation of women within the Senior Management Service. The department will be working tirelessly toward reaching the 50 % target for women representation within the Senior Management by 2009. Challenges still exist in sourcing of people living with disabilities within the entire establishment. The department, however, has a very active Disability Forum which is a substructure within the Employment Equity and Transformation Consultative Forum. Under this forum, a number of strategies have been conceived and are being implemented to attract employment of people living with disabilities as well as creating an environment sensitive and conducive to such employment.

Programmes have been established to advance women in agriculture, the flagship being the Female Farmer of the Year Awards. The department further ensures that its empowerment programmes are biased towards women and youth within the sector.

Broad transformation within the department therefore involves the role played by targeted groups, including women, the disabled and youth in all departmental activities. The department has also developed the necessary systems to strengthen Preferential Procurement in line with the PPPFA, also in support of Government's BEE strategy.

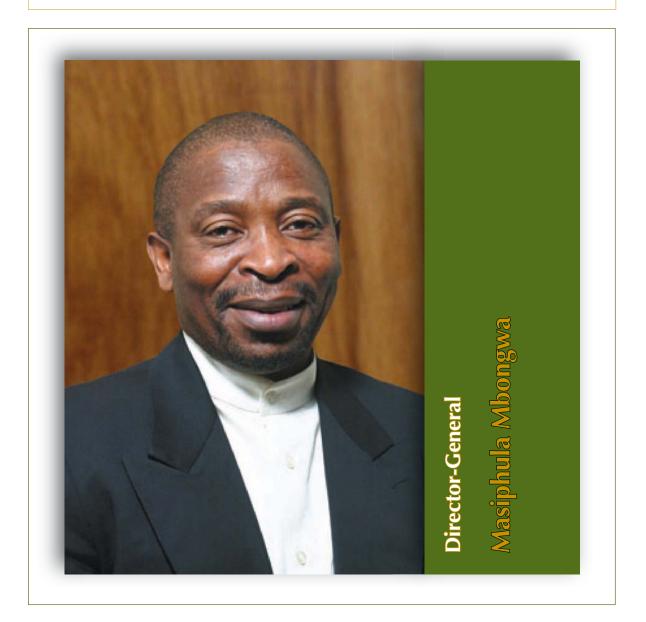

Strategic plan DoA 2006

PROGRAMME 1

Administration

RESPONSIBILITY

- Director-General
- Chief Operating Office
- Chief Financial Office
- Chief Programmes Office

PURPOSE

Provide the department with political and strategic leadership and management, and manage capital investments.

PROGRAMME OVERVIEW

The programme comprises the Office of the Director-General, Human Resources and Legal Services and Financial Management. It fulfils the responsibility of ensuring that transformation imperatives, overall security and internal audit. Governance principles are adhered to within the department. The programme is also responsible for overseeing and monitoring organisational performance against the overall strategic goals of the department.

This programme provides support to the Ministry and serves as an interface between the department and Parliament. Through its activities, the programme ensures that there is alignment between departmental and broader government-wide programmes. The programme has a responsibility for ensuring that intergovernmental relations with other spheres of government are maintained and enhanced, in particular, alignment with the PDAs. The communication component will report to this programme, with effect from 1 April 2006.

As part of the macro restructuring of the department, a new position of Chief Programmes Officer (CPO) has been introduced to improve, through external coordination, the positive impact of departmental programmes on the agricultural sector value chain. The core functions of the CPO are to coordinate the implementation of *The strategic plan for South African agriculture* and monitor its impact. Furthermore, to lead and coordinate cross-cutting departmental initiatives whose effective implementation, and impact is dependent upon joint activities, partnering and synergy between the multiple disciplines in the DoA, state-owned enterprises, other government entities and stake-holders. The CPO will also quantify and profile the overall role and impact of DoA programmes on the sector.

	247 195	261 832	275 152

STRATEGIC OVERVIEW AND PROBLEM STATEMENT

Government priorities also shape the direction and nature of our interactions. The objectives of the Accelerated and Shared Growth Initiative will be afforded a prominent place in the approach to planning and delivery. The department, in its planning for this five-year MTEF period, has reviewed certain trends and expected occurrences, which it wishes to influence or to which it has to develop responses. The programme has assessed these as they relate to its mandate and a proactive approach has been taken in recognising the following in its five-year planning:

- Accelerating the opportunities presented by a more united and equitable agricultural sector
- The opportunities presented by the 2010 World Cup, e.g. promoting truly South African indigenous agricultural products and cuisine as well as agri-tourism
- The need and opportunities for promoting innovation in and markets for value added agricultural products
- The need for collaborating with various government and private sector agencies in improving agricultural marketing logistics systems
- Placing a greater emphasis on intra-African trade.

KEY RESULT AREAS

Overall effective, efficient and timely delivery on the department's mandate within the allocated resources is a key result area of this programme. To achieve this objective, the programme ensures that the department consistently applies the South African Excellence Model for continuous service delivery improvement and quality of service. This programme continues to review existing performance management systems for their effectiveness in order to support the department's overall objective of service excellence.

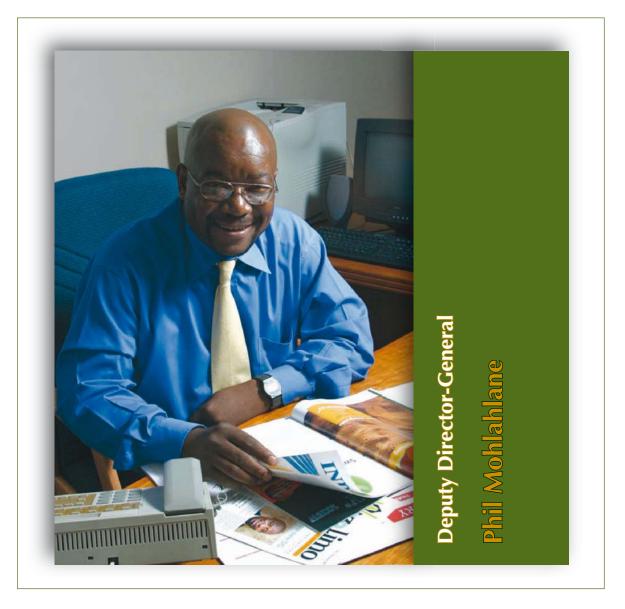

IMPLEMENTATION STRATEGY

Implementation of programme objectives is guided by the recognition and strengthening of broad governance principles and structures that have been built by the programme over the recent past. These include the continued effective participation in government cluster processes, fostering healthy intergovernmental relations with the provinces and consolidating internal departmental governance structures.

An emergent recognition of the importance of the management of information and knowledge will occupy centre stage in the functioning of the department. As a knowledge institution itself, the department will commit resources to this endeavour while ensuring that knowledge and information sharing permeates throughout the department in order to optimise capacity building initiatives.

The experience gained from the conducting of quarterly review meetings (QRMs) over the last four years has had tremendous benefits for the department. This process has now been structured to ensure that it is perfectly aligned, in terms of its programme and focus, to the overall planning cycle of government. At policy level, attention will be given to ensuring the effective implementation of departmental strategic objectives and priorities over the MTEF period.

Livelihoods, economics and business development

RESPONSIBILITY

Deputy Director-General: Livelihoods, Economics and Business Development

PURPOSE

Promote equitable access to the agricultural sector, the growth and commercial viability of emerging farmers, and food security and rural development. Facilitate market access for South African agricultural products nationally and

internationally by developing and implementing appropriate policies and targeted programmes. Promote Broad-Based Black Economic Empowerment (BEE) in the sector. Provide information for developing and monitoring the agricultural sector.

The programme comprises three subprogrammes:

- Livelihoods Development Support provides post-settlement support to emerging farmers, promotes farmer co-operatives and village banks and is responsible for food security policy and legislation, programmes and information.
- Trade and Business Development facilitates international and domestic market access for South African agricultural products and promotes BEE in the sector. It also interacts with the National Agricultural Marketing Council.
- Economic and Statistical Services provides for the collection and analysis of agricultural statistics, monitors and evaluates the economic performance of the sector and produces quarterly reports on sector trends. It also interacts with Statistics South Africa.

KEY RESULT AREAS

Measurable objective: Improve emerging farmers' access to and sustained participation in agriculture, and improve food security in the medium term through providing better opportunities and more equitable access in order to maximise growth and employment in the sector.

Subprogramme	Output	Measure/indicator	Target
Livelihoods Development Support	Improved household food security	Number of food insecure households reached	62 000 household food production packages
	Roll-out of Mafisa	Number of farmers awarded loans	2 000 farmers
Trade and Business Development	Sector specific strategies	Number of strategies	2 strategies
Economic and Statistical Services	Reports on the perform- ance of the sector	Number of reports published	6 statistical reports 10 economic reviews 6 topical reports

	746 783	919 181	951 444

subprogramme Livelihoods development support

RESPONSIBILITY

Assistant Director-General: Livelihoods Development Support

PURPOSE

Promote stability, competitiveness, growth and transformation in the agricultural sector by developing policies governing Land Settlement, Food Security and Agricultural Development Finance.

STRATEGIC OVERVIEW AND PROBLEM STATEMENT

The Subprogramme Livelihoods Development Support will focus on eliminating skewed participation in the agricultural sector by reducing inequality in land and enterprise ownership as outlined in *The strategic plan for South African agriculture.*

The subprogramme will ensure adequate co-ordination and integration of efforts of different institutions of service delivery. In this regard, the aligned LRAD and the CASP will strive to increase the number of viable commercial farmers from PDIs. To ensure sustainability of the Land and Agrarian Reform Projects further resources will be devoted to support services (CASP).

The development of a third tier financial services sector that has a focus on the "unbanked", is a major objective of the Financial Services and Co-operative Development programme. The Agricultural Credit Scheme as a stateowned scheme provides micro and retail agricultural financial services and facilitates the access to public sector programmes to enable market efficiency.

Agricultural production at household level needs promotion in the South African context where more than 2 million households are food insecure. In this respect the development of the FIVIMS will assist in the design of well-targeted interventions. A key intervention on the food security front will be the provision of agriculture starter packs to support agricultural production as part of the IFSNP. The subprogramme will continue to play a co-ordinating role for the cross-cutting issue of food security at national and international levels.

IMPLEMENTATION STRATEGY

Governance

The subprogramme will work more closely with provincial and local structures in each of its directorates, namely Land Settlement, Food Security and Agricultural Development Finance. Land Settlement Provincial Co-ordinators will facilitate and monitor this subprogramme at provincial and local spheres of government. These co-ordinators will also provide liaison and an integrative function with other subprogrammes in the department. The subprogramme will especially be tasked with the responsibility of facilitating the development of a framework for mutual support to land and agrarian reform projects, according to which the roles of the different players will be defined. Ensuring an integrated approach in the conception and planning of land and agrarian reform, including the food insecure and the vulnerable is one of the subprogramme's priorities.

Access to finance and investment

The micro-credit scheme (Mafisa) launched in 2005, the Finance Sector Charter and AgriBEE will provide opportunities for the subprogramme to increase access to finance and investment for the sector. An identification of such opportunities will be undertaken through the various task teams and working groups through the Directorate: Agricultural Development Finance.

Human resources

The current structure of the subprogramme has a total staff establishment of 126 posts. Altogether 90 % of the funded posts are filled and the posts are being filled as and when they become vacant.

Knowledge and information management

Further elaboration and construction of the FIVIMS will be undertaken together with ongoing food security campaigns as part of broader information dissemination.

SUBPROGRAMME

Trade and business development

RESPONSIBILITY

Assistant Director-General: Trade and Business Development

PURPOSE

Develop policies to promote access to national and international markets and to enhance broad-based black economic empowerment in the sector.

STRATEGIC OVERVIEW AND PROBLEM STATEMENT

The implementation of *The strategic plan for South African agriculture* (Sector plan) will continue to guide the subprogramme's activities.

The subprogramme will take the lead in the department regarding World Cup 2010 opportunities. Therefore, new commodity plans, the promotion of value addition, agri-tourism, promotion of indigenous products and plans for upgrading agricultural marketing logistics feature in our strategy.

The conclusion of the AgriBEE Charter and Scorecard for the agricultural sector will guide a number of programme activities and outputs department-wide. Promotion of AgriBEE targets, as well as support for and monitoring of AgriBEE will be a core activity of the Directorate: Business and Entrepreneurial Development in 2006.

The developing country negotiating group, the G20, continues to play an important role in ensuring developing country issues and those of South Africa are dealt with substantively in the WTO Doha Development Agenda. The in-house trade research and analysis capacity will continue to assist in furnishing the detail required for preparations for bilateral and WTO negotiations.

A continuation of the SACU free trade agreements (FTA) negotiations with the US and possible new trade negotiations in 2006 with India, China and Africa will impact on departmental capacity, both in terms of trade negotiators and for the animal and plant health and food safety units. A focus will be on improving intra-African trade in the MTEF period.

A core instrument of empowerment and an element underlying the efficiency of the agricultural economy is market and price information. The Directorate: Marketing will play a central role in implementing a market information system accessible to all and providing appropriate and timely agricultural marketing information. Marketing training by the directorate has been well received by emerging farmers and extension officers alike and enhances market access by the beneficiaries. The directorate will continue to support the implementation and rolling out of the agricultural marketing training. Furthermore, the directorate will continue to manage the allocation of preferential trading permits in accordance with government objectives, with greater emphasis placed on enhancing access to these preferential trading permits by emerging agribusiness entrepreneurs. The directorate will deliver proposals on agricultural marketing policy. Norms and standards developed by the directorate will continue to assist provincial and local government in supporting farmers by establishing marketing infrastructure and logistics.

IMPLEMENTATION STRATEGY

Governance

The activities of the subprogramme require co-ordination and collaboration internally and with other government and private sector stakeholders in developing policies, e.g. AgriBEE, negotiating positions, setting norms and stand-

ards, commodity specific action plans, and programmes and projects. The department and the dti have agreed that commodity strategies will in future be developed and implemented jointly.

The Senior Manager: Business and Entrepreneurial Development collaborates as required with commodity groups and others. The directorate will be involved in the implementation of the AgriBEE Charter, including advocacy, financial support and facilitating scorecards. Development of commodity action plans in terms of the Sector plan is mainly through facilitation by the Senior Manager: Business and Entrepreneurial Development or contracted external facilitators.

The Senior Manager: International Trade utilises the Agricultural Trade Forum (ATF) and NEDLAC in which national Government, labour, private sector stakeholders and provinces are represented. The ATF is used to report on and receive inputs regarding trade negotiations and relations. The department has commenced close collaboration and consultation processes with the BLNS countries in terms of the new SACU Agreement in order to conclude consensus positions for negotiations. The subprogramme is heavily involved in trade negotiations in which the subprogramme manager, Senior Manager: International Trade, deputy directors and specialists play an active role. The directorate interacts with different alliances within the WTO to promote its trade interest. Trade analyses tools are utilised and made available.

The Senior Manager: Marketing participates in the ITCA's Agricultural Economics Standing Committee (AESC). Marketing initiatives are mostly undertaken in accordance with recommendations generated by the National Agricultural Marketing Council (NAMC) and BATAT reports and observations by the directorate within the current agricultural marketing environment. The Senior Manager: Marketing maintains close liaison with the NAMC. The department will facilitate market access by advocacy, promoting norms and standards, and utilising other instruments of support to deal with such demands. The directorate issues preferential trade permits in terms of trade agreements.

Implementation of commodity action plans and ATF activities are reported to the department, ITCA, MinMec, and the Sector plan implementation committee. The Parliamentary Portfolio Committee on Agriculture is informed biannually on trade negotiations.

Knowledge and information management

The ATF will continue to be utilised as the prime vehicle to liaise with stakeholders in agricultural trade and convey information relating to agricultural trade negotiations and relations.

Parliamentary committees, the ATF and marketing forum in the AESC will be briefed regarding important developments, e.g. on trade, marketing and AgriBEE. Liaison will be maintained principally with the dti, the Department of Transport, PDAs, the newly-established Agriculture Chief Executives' Forum, farmers, industries and commodity groups, as well as extension officers to advocate key objectives of the programme.

The subprogramme manager chairs the Departmental Information Technology Committee (DITC) and DEXCO International Co-ordination Committee (ICC).

International engagement

The subprogramme is involved internationally in trade negotiations and facilitation, networking, e.g. commodity organisations and agribusiness collaboration.

SUBPROGRAMME

Economic and statistical services

RESPONSIBILITY

Assistant Director-General: Economic and Statistical Services

PURPOSE

Provide information for developing and monitoring the agricultural sector.

OBJECTIVE

The subprogramme aims to render agricultural economic and statistical services in support of economic growth, development and an equitable agricultural sector. The subprogramme monitors the economic performance of the sector and generates national agricultural statistics. It researches and renders advice on agricultural economic and policy issues. It provides support and sets norms for agricultural production and resource economic services, and it promotes the acquisition and retention of skills in agricultural economics and statistics. The subprogramme is therefore responsible for the establishment and management of a national agriculture database, the establishment and promotion of agricultural economic instruments and standards, and the determination of policy options from which the department can choose.

PROBLEM STATEMENT

The department has identified the lack of a comprehensive and accurate statistical database on the agricultural sector as the primary obstacle to effective planning, decision making, implementation and support of development initiatives. The DoA therefore needs to strengthen and maintain its statistics management capacity at a level commensurate with the strategic importance of the function.

The collected statistics have to be analysed expertly and interpreted so that they can inform management and policy decisions. The DoA therefore needs to speedily complete the establishment of an economic analysis unit in order to exercise its leadership of the sector.

The dire shortage of project planning and evaluation skills in the country means that development projects are often not planned or nonviable economic choices are made by PDAs and other implementing agencies. The DoA therefore has to develop guidelines and co-ordinate training and the use of appropriate instruments in agricultural production and resource economics.

IMPLEMENTATION

- Complete implementation of the new approved subprogramme structure by advertising of approved and funded positions, and appointment of qualified personnel.
- Continue building adequate analytical and advisory capacity to ensure that government intervention and management of the sector are based on economic realities, and are therefore effective and efficient.
- Strengthening of the Agricultural Economics (ITCA) Standing Committee as an effective liaison and co-ordination forum for service delivery in support of CASP and other public agricultural economics and statistical services.
- Developing and negotiation of access to databases and analytical tools needed to perform the mandate of the subprogramme.
- Strengthening of efficient communication channels and liaison forums for networking with clients, partners and service providers.
- · Establishment of a national agricultural economics research agenda.
- Developing and implementation of guidelines for the standardisation of national norms and standards for economic analysis.
- Maintaining optimum service delivery levels on routine functions carried out within the subprogramme in accordance with available resources and capacities.
- Seeking and maintaining working conditions conducive to productivity and professional growth of agricultural economists and statisticians, while ensuring that others understand and appreciate the role of the function.

PROGRAMME 3

Biosecurity and disaster management

RESPONSIBILITY

Deputy Director-General: Biosecurity and Disaster Management

PURPOSE

Develop and implement policies for food safety, agricultural risk and disaster management and for controlling animal and plant diseases. The programme comprises two suprogrammes:

- Plant Health and Inspection Services focuses on policies and systems to control plant diseases and on making sure that illegal agricultural products do not enter and leave South Africa. It also makes sure that plant products are of good quality.
- Food, Animal Health and Disaster Management manages animal diseases and assists in negotiating protocols for importing and exporting animals and animal products, makes sure that animal products are of good quality and safe, and develops the agricultural risk and disaster management policy framework.

KEY RESULT AREAS

Measurable objective: Reduce the incidence of animal and plant diseases and ensure compliance with international and national agricultural risk and disaster management measures through improved risk management systems.

Subprogramme	Output	Measure/indicator	Target
Plant Health and Inspection Services	Efficient regulatory systems and integrated control measures	Agricultural Pests Act 1983 amended	March 2007
Food, Animal Health and Disaster Management	Reduced incidence of animal diseases	Improved physical controls set up in all high-risk areas	March 2007
	Effective food control	Food control strategy approved by Cabinet	March 2007
	Agricultural risk and disaster management	Risk and disaster inform- ation provided to farmers	40 000 farmers reached
	Early warning and bio- security disaster manage- ment systems	Number of reports on projects compiled	2 reports

PLANNED EXPENDITURE

	2006/07 R'000	2007/08 R'000	2008/09 R'000

	245 939	258 096	281 381

SUBPROGRAMME

Plant health and inspection services

RESPONSIBILITY

Assistant-Director-General: Plant Health and Inspection Services

PURPOSE

The Subprogramme: Plant Health and Inspection Services focuses on developing and implementing effective management systems, plant health policies and inspection systems for biosecurity, biosafety, quality and intellectual property infringement risks associated with regulated articles. The subprogramme must align these policies and systems with international and national plant health and other relevant obligations and responsibilities in support of agricultural industries, environment, public health, trade, food security and safety.

PROBLEM STATEMENT

Plant health and inspection service issues are of increasing importance to South Africa, to protect agricultural industries, the environment, public health and safety, as well as trade and food security. Risks associated with changing trade arrangements, increased tourism and travel have to be identified and managed effectively.

The strengthening of FTAs and progressive elimination of tariffs, under WTO arrangements, are leading to increased potential for a range of plant products to be exported throughout the world. Increased movement of such products increases risk of movement of pests and diseases, noncompliance to biosecurity measures, quality regulations, food safety standards and infringement on intellectual property rights. These risks require prompt identification, assessment, management and mitigation.

IMPLEMENTATION STRATEGY

Governance

Management of the subprogramme requires facilitation of trade and tourism while managing and mitigating risks associated with those movements. The governance system actively takes advantage of South Africa's plant health status for the environment, social and economic benefit of the country. This is a resource-demanding process necessitating ongoing assessment of a wide range of risks, including pest incursion responses within the country (resource allocation), operational delivery of quarantine services at the border, and even addressing plant health risks in relation to movements within South Africa.

While the emphasis has previously been on import and export control, domestic control will currently receive equal attention. A thrust towards proper inspection and audit systems for local trade control for food safety, quality, genetic resources, biosecurity and pest surveillance programmes is envisaged. An aggressive pursuit for non-compliant regulated articles in areas identified as 'hotspots' will be followed.

Emphasis will be directed towards engaging other government departments, stakeholders and clients in identifying roles and responsibilities for effective governance. Partnerships with private entities will be forged on areas of mutual concern, especially on trade control of regulated articles, risk management systems and pest surveillance. In the quest to strengthen border control through interdepartmental synergies, engagements and participation on the three tiers of the Border Control Operational Co-ordinating Committee (BCOCC) will be maximised. The SADC trading partners will be consulted on mutual inspection areas for regional harmonisation.

HUMAN RESOURCE MANAGEMENT

Human capital is the most important resource. The subprogramme will strive to recruit, train and retain personnel to meet current needs while strategically ensuring that intellectual capital is documented for the future.

KNOWLEDGE AND INFORMATION MANAGEMENT

Provide leadership in plant health and inspection service matters to secure a consistent, total-government approach to the management of information, processes, systems and infrastructure through improving internal communication, working with other departments and ministries to ensure a total-government approach, understanding what systems other departments/programmes use and their plans for the future and identifying opportunities for total-government information systems and technology applications.

SUBPROGRAMME Food, animal health and disaster management

RESPONSIBILITY

Assistant Director-General: Food, Animal Health and Disaster Management

PURPOSE

The subprogramme is responsible for managing the risks associated with animal diseases and the assurance of access to safe, quality agricultural food products by developing appropriate policies and legislation.

PROBLEM STATEMENT

A lack of co-ordinated and responsive veterinary services in South Africa as a result of shared competence between national and provincial administrations. A poorly defined and shared food control system between different government departments, including the provinces.

Extraordinary challenges from disease outbreaks that have compromised focus on core activities such as disease surveillance and extension for animal disease control. Programme development for food safety assurance such as the monitoring of agricultural food products in terms of compliance with microbiological criteria as well as for chemical residue.

A shortage of skilled personnel to fill vacancies and drive service delivery at both national and provincial levels, as well as the inability to retain them once they enter the public service.

IMPLEMENTATION STRATEGY

Governance

Working with provinces and local government structures to ensure delivery of basic services to the farming community and the public at large will be a priority area for this subprogramme.

Collaboration with other government departments and cluster systems to ensure co-ordination of service delivery and strengthening the ITCA Veterinary Working Group. Another focus area will be the strengthening of communication within the subprogramme and across the department.

Other priority areas include strengthening law enforcement of all Acts in the subprogramme; increasing participation in standard-setting bodies and encouraging regional co-operation when taking positions at these bodies and working with SADC structures to develop policies and strategies for minimising risks associated with agricultural products.

Given the climatic variability in South Africa and the Southern African region there is a need to develop risk and disaster management strategies and plans to ensure food security. Account should be taken of the various types of weather related and other disasters and the plans should form the backbone of an early warning system at both national and regional levels. The Directorate: Agricultural Risk and Disaster Management will continuously assess the drought situation and monitor the implementation of the disaster assistance schemes in all provinces.

Human resource management

During 2006 intervention measures will be targeted for the retention and recruitment of technical expertise using appropriate policies to address the critical shortage of scarce skills in the subprogramme; developing a database for retired officials for handling emergency disease outbreaks; developing effective succession plans to ensure appropriate transfer of skills to the newly-employed staff and creating an environment, which will allow young scientists to prosper.

Knowledge and information management

The scientific knowledge of members of the subprogramme will be nurtured in order to ensure continuity of programmes and projects. Exposing provinces to some of the international standard-setting bodies will be the focus this year and this will expand knowledge of the impact on policy implementation.

Updating of existing policies and legislation to address current challenges and developments flowing from standardsetting bodies.

Drafting and implementation of SOPs where these do not exist to ensure that documented procedures are the basis for key activities.

Increased interaction with other African countries for harmonisation of policies relating to animal and food safety control. The programme will also focus on improving skills of staff in systems for information and knowledge management.

A disaster early warning system, comprising wider dissemination of advisories on climate and food security, will constitute an important element of the subprogramme's implementation strategy. An awareness campaign on agricultural risks and disaster management principles will also be embarked upon.

PROGRAMME 4

Production and resources management

RESPONSIBILITY

Deputy Director-General: Production and Resources Management

PURPOSE

Manage productivity and sustainability in agriculture, monitor and control genetically modified organisms and develop and implement policies and legislation on the sustainable use of agricultural land and water resources.

The programme comprises two subprogrammes:

- Agricultural Production facilitates improvements in agricultural productivity, with the emphasis on sustainable animal and aquaculture production systems and administers the Animal Improvement Act, 1998.
- Engineering, Energy, Resource Use and Management facilitates the development of agricultural infrastructure. Other activities include auditing natural resources, controlling migratory pests, rehabilitating and protecting agricultural land and running the community-based LandCare programme.

KEY RESULT AREAS

Measurable objective: Improvement of the productivity and profitability in the agricultural sector and the more sustainable use of land and water resources.

Subprogramme	Output	Measure/indicator	Target
Agricultural Production	Plant production guidelines and animal improvement and development pro- grammes	Availability of a national aquaculture programme, goat productivity improve- ment programme, feedlot/ grass lot programme	By March 2007
		Publication of product- specific production guidelines, programmes and projects	By March 2007
Engineering, Energy, Resource Use and Management	Implementation plan for infrastructure development	Availability of an implement- ation plan that increases water use efficiency on 50 000 ha of irrigated land	By March 2007
	Soil protection strategy	Baseline information for three catchment areas	By February 2007

Transfers and subsidies	47 561	49 775	52 519	
Payments for capital assets	3 969	3 930	3 941	
	240 514	253 045	264 638	

PROBLEM STATEMENT

South Africa's natural agricultural resources are limited. This results in unsustainable agricultural practices such as intensive utilisation of existing good agricultural resources and the use of marginal lands. Further, this limits the country's scope for expansion of field crop and horticultural production.

The country has limited water resources and agriculture is increasingly facing competition from other demands for water. There is uneven rainfall distribution throughout the country with an average annual rainfall of 500 mm. High temperatures, very low relative humidity and high vapour pressure deficits lead to high potential evapotranspiration that significantly exceeds the rainfall figure. In addition periodic and prolonged droughts at critical stages of crop production are frequent. Several studies project that South Africa's per capita availability of renewable water will decline from 1 200 m³ in 1992 to 760 m³ in 2010 – a decline of 37 % over the period or 2,5 % per annum. This scenario presents significant challenges to rain-fed crop production and intensive livestock farming.

Soil degradation caused by a variety of factors has been identified as a serious factor reducing the productivity of South African soils. Unsustainable farming practices have contributed to increased acidification, reduction in organic matter and severe erosion of soils. Inappropriate land use selection, poor management and misapplication of technology have contributed to degeneration of dryland ecosystems; desertification has, therefore, become a serious threat.

The sector plan has identified energy and capital inputs as critical to optimising productivity and competitiveness of the sector. Similarly, the need for sustainable natural resource management implies focus on the utilisation of renewable energy in agriculture. Capital investments in the agricultural sector have to be increased, particularly mechanisation, to enable resource-poor farmers to raise productivity.

IMPLEMENTATION STRATEGY

Governance

The programme aims to provide national leadership and support for sustainable agricultural production, research, technology development and dissemination. In order to achieve these aims, the programme will improve co-ordination and collaboration for developing and implementing policy, legislation, norms and standards, research, development and transfer of technology, both internally (within the programme and department) as well as at interdepartmental level (national, provincial and local government).

Co-ordination and collaboration of programme outputs with external clients will be through commodity/industry specific strategies, action plans and projects (workshops, meetings, publications, communication, etc.). Project managers may be appointed to accelerate implementation of programmes.

The programme works with the ARC and the collective of stakeholders, the National Agriculture Research Forum (NARF) to co-ordinate and facilitate support for agricultural research, development and transfer of technology. To ensure the success of South African agriculture and the objectives of the NEPAD and SADC, the programme will also participate at international meetings (bilaterals and multilaterals), particularly on standard-setting and production matters.

In addition, there will be collaboration with PDAs and other stakeholders in the form of committees such as the National Plant Genetic Resources Committee, the Co-ordinating Committee on Agricultural Water, Mechanisation and Energy Management Committees to ensure efficient management of natural resources.

Knowledge and information management

Consultative forums will continue to be utilised as vehicles to liaise with stakeholders in the programme to convey information on agricultural production and resource management, particularly focusing on optimising productivity. Internally, the ITCA working groups will be utilised to focus on information dissemination to the broader set of external clients.

Tools such as Land Degradation Assessment in Dryland Areas (LADA), AGIS and others will be utilised to implement projects and programmes for optimising productivity. Technical guidelines will continue to serve as tools for agricultural advice to producers.

Similarly, information sharing networks within the country and internationally will be utilised to improve service delivery.

Risk management system

Internal risks are managed through monthly reporting on expenditure, performance and ensuring compliance to PFMA.

The programme also promotes agricultural research, development and transfer of technology in priority areas that mitigate against risks to agricultural production.

International engagements

At the international level the programme will continue to protect national interests on agricultural production and natural resource management. This will entail engagements in standard-setting bodies such as the International Union for the Protection of New Varieties (UPOV), World Intellectual Property Organisation (WIPO), International Seed Testing Association (ISTA), Food and Agriculture Organisation (FAO), Organisation for Economic Co-operation and Development (OECD), World Trade Organisation (WTO), Convention for Biological Diversity (CBD) and United Nations Environment Programme (UNEP). The programme's international engagement will be guided by departmental priorities as well as collaboration within the context of NEPAD and the SADC.

PROGRAMME 5

Sector services and partnerships

RESPONSIBILITY

Deputy Director-General: Sector Services and Partnerships

PURPOSE

Manage and co-ordinate stakeholder and international relations, agricultural education and training, extension and advisory services, and scientific research and development.

The programme comprises two subprogrammes:

- Sector Services provides for agricultural education and training.
- Intergovernmental and Stakeholder Relations is responsible for bilateral and multilateral international relations, and for strengthening relations between the national department, PDAs and industry stakeholders.

KEY RESULT AREAS

Measurable objective: Maximise growth in the sector through providing skills, agricultural education and support services to emerging and established farmers.

Subprogramme	Output	Measure/indicator	Target
Sector Services	Governance framework for colleges of agriculture	Availability of the framework	By March 2007
	Training for agricultural students	Number of students trained	200 students by end 2007
Intergovernmental and Stakeholder Relations	Strengthened agricultural relations in the region	Number of bilateral regional visits	Visits to all SADC countries

PLANNED EXPENDITURE

	2006/07 R'000	2007/08 R'000	2008/09 R'000

	477 217	501 336	527 041

SUBPROGRAMME

Sector services

RESPONSIBILITY

Assistant Director-General: Sector Services

PURPOSE

Manage and co-ordinate agricultural education and training, extension and advisory services, scientific research and development and the Grootfontein Agricultural Development Institute.

PROBLEM STATEMENT

In creating coherence and synergy in the sector there is a strong need to provide an integrative national framework for agricultural research, transfer of technology and agricultural education and training. The lack of a governance

framework for colleges of agriculture in particular, hampers the development of a cadre of farmers that will restore dignity to the rural populations of South Africa.

IMPLEMENATION STRATEGY

Governance

A National Agricultural Education and Training Forum (NAET) will be established as well as a model for governance of colleges of agriculture. An enabling environment will be created for the implementation of the norms and standards for extension and advisory services. Monitoring the adherence of the department and ARC to the tenets of the Service Level Agreement on specific projects will be an integral part of the subprogramme.

Human resources

There will be a strong need to finance both the macro and micro structure of the subprogrammes for the effective rendering of products and services to the clients. The Directorate: Education and Training will undergo restructuring to accommodate added responsibilities such as co-ordination of targeted training programmes and secretariat to the NAET.

The focus on human resource development will be on scarce skills as well as the promotion of emerging entrepreneurs in the sector. An additional R2 million will be invested for academic training and mentorship support to unemployed and underemployed agricultural graduates in partnership with established agriculture and business schools. The external bursary scheme will focus on providing support to high-level degrees, mainly Masters and Ph.D. students as a strategy to strengthen agricultural research, extension and advisory services. Bilateral and multilateral agreements will be utilised to source funding for critically scarce skills such as Veterinary Science and Agricultural Engineering.

Knowledge and information management

A report on graduate input and output from the Further Education and Higher Education band will be released by March 2007. Information on the profile of farmers who have received skills development support over the past year will be collected from the AgriSETA, FoodBEV SETA, academic institutions and PDAs. Information on available research solutions will be customised for the benefit of both emerging and established farmers.

Analysis of constraints

A shortage of skilled personnel to address the challenges facing the emerging farmer will continue to hamper service delivery. While the Minister has pronounced through the AgriBEE framework a need to accelerate skills development in the sector there is a serious lack of accredited and reputable training service providers. Both the colleges of agriculture and universities should be persuaded to focus on skills development initiatives, which are informed by the needs of the sector.

Research and development

To ensure the success of agricultural productivity the subprogramme will continue to promote the department's research agenda through networks such as the NARF, National Science and Technology Forum, Water Research Commission, ITCA and MinMec. In addition, the subprogramme will facilitate support for agricultural research and technology development through resource mobilisation, both directly from the National Treasury and indirectly through collaborative programmes with internal and international partners.

In order to maximise the impact of agricultural research and technology development, the programme will support and facilitate information dissemination through internal (national, provincial and local) and external (NARF, NGOs, etc.) networks, publications, workshops, meetings and other avenues. Collaboration will be encouraged to facilitate the delivery of research and technology development outputs.

The subprogramme will facilitate regional collaboration on agricultural research and technology development, particularly to enhance the achievement of NEPAD, SADC and IBSA (India, Brazil and South Africa trilateral cooperation) objectives. In this regard, the programme will encourage participation in the FARA as well as the SADC. The objective of such collaboration is to influence the research agenda for Africa's development within the framework of the CAADP. A similar approach will be utilised internally through the NARF. In this regard, resource mobilisation in the form of collaboration with the Consultative Group on International Agriculture (CGIAR) and the FAO will be encouraged and facilitated by the programme.

SUBPROGRAMME

Intergovernmental and stakeholder relations

RESPONSIBILITY

Assistant Director-General: Intergovernmental and Stakeholder Relations

PURPOSE

Manage and co-ordinate international relations and provide monitoring and evaluation leadership and support for improved organisational performance.

PROBLEM STATEMENT

The demand placed on the department to meet national obligations with respect to the international agricultural community is increasing. Of note, is the need to focus on the implementation of the NEPAD/CAADP inside the country, but also to assist with implementation within Africa.

Continuing to build partnerships both at bilateral and multilateral levels in pursuit of our objectives of trade, training and technical assistance will be the major focus of our work in the coming year.

While tremendous progress has been made in setting up and communicating the framework for monitoring and evaluation within the department, the challenge of using the framework to test indicators within the department and with provinces remains.

IMPLEMENTATION STRATEGY

The success of the subprogramme is dependent upon strategic engagements both within the department with line function units as well as with the Department of Foreign Affairs as well as the dti on international relations matters. Therefore, priority will be given to regular and consistent engagements with these entities.

In addition, greater effort will be made in interacting with StatsSA, DPSA and other national departments as we rollout the departmental monitoring and evaluation system.

Measures will also be taken to address the capacity issues within the sub-programme through vigorous recruitment to fill the current vacant and funded posts, while working within the department to source resources for the vacant and unfunded posts.

Afric	an Agri	African Agricultural De	svelopmen	Development Programme	me

7.	Provide administrative support with regard to appointment of boards,	 Co-ordination, arranging and administration of appointment of boards, committees and councils by the Minister Arranging for appointments of boards, committees and councils at least 1 year before the term of expiry 	l to tio urds, te
	committees and councils	Calling for and safekeeping of annual Annually reports of public entities reporting to the department	• C
8.	Promotion of Access to Information Act	 Managing all requests for information from the department in terms of the Promotion of Access to Information Act, including objections, appeals and refusals To conform with the prescribed time limit as set out in the Promotion of Access to Information Act, which is 30 days 	fr P in
		Update and lodging of information Continuous manuals in terms of the act	

ANNEXURE 1(B)

Service standards: Information and communication technology

Supporting activity	Product and services	Service standards
Manage and provide information and communica- tion technology support services	Develop and maintain a Master Information System Plan (MISP) or Information Technology Plan (ITP)	Updated annually should any business priorities change after DoA strategic planning
	Develop and maintain computerised information systems (applications)	New systems
		There are two types of systems, <i>viz</i> . corporate and end user computing (EUC) systems. DITC approval must be obtained for both of these systems to be developed. Users develop EUC systems themselves. Corporate systems can be devel- oped in-house (MISP priorities only), by SITA in terms of a SLA (user pay) or be outsourced <i>via</i> a tender (ITAC). All de- velopment must be undertaken in terms of the approved OPM methodology based on an accepted project plan. This will de- termine the individual timeframes (depending on extent of a specific system)
		Systems maintenance
		Needs must be directed in writing to D: ICT. Maintenance can be undertaken by D: ICT (in-house) or by SITA in terms of an SLA (user pay principle). A quote and/or project plan for time and cost will be provided per individual request
	Relevant geo-referenced agricultural information to stakeholders	AGIS policy
		Updated as and when necessary
		Application development
		See computerised information systems
		Existing and processed maps production
		Four days from receipt of request via e-mail
	Effective database adminis- tration	The uptime of the central database server (corporate systems) is specified at 95% per month on a 24-hour basis. Advice on other database applications is available as/when requested
	Internet services	See approved Internet utilisation policy for DoA. Official Inter- net access will be available within 10 days after approval
	DoA and AGIS web sites	DoA Internet web page (Webmaster function)
		Users who want to put information or suggestions on the In- ternet web page must direct all their inputs to D: AIS. If the format/construction of the web must be changed, D: AIS will inform D: ICT accordingly. Lesser changes will take 14 days. Major changes will be accommodated within 28 days. See also <i>Geo-referenced agricultural information</i>

Supporting activity	Product and services	Service standards
Manage and provide information and communica- tion technology support services	Intranet services	There is a prescribed standard and procedure for documenta- tion to be published on the Intranet. This documentation must be provided to D: ICT in electronic format (<i>via</i> e-mail) as it will be displayed on the Intranet. After receiving the information in correct format, it will take a maximum of 14 days before it will be available on the Intranet. Changes of existing information on the Intranet follow the same procedure. It should be noted that directorates are encouraged to manage their own informa- tion on the Intranet (contact D: ICT for further information)
	E-mail services	Uptime of e-mail servers is specified at 90% per month. See also <i>E-mail policy for DoA</i>
	IT security policy and standards	IT security policy, standards and procedures are updated an- nually. See also approved <i>IT security policy for DoA</i>
	Availability of transversal mainframe connections	New access points to mainframe applications available within 3 days after request. See also <i>End user support policy for DoA</i>
	Backup of electronic information	End users have responsibility to back up important information on their PCs to the file server. Backup of servers undertaken weekly. Restoring of lost information (if available on home di- rectory/folder) within 48 hours
	IT disaster recovery	As determined by IT disaster recovery policy
	Telephone services and video conferencing	Requests for new telephone instruments, opening of tele- phone lines, voice mail, etc. must be submitted to D: ICT on the prescribed application form available on the Intranet. Re- quests, after approval, will be attended to within 3 working days. Faulty instruments must be reported at ICT Help Desk and will be attended to within 3 days
	Telephone accounts and calls administration	Detailed call accounts of employees will be made available to SMS members within 1 week after end of month
	WAN infrastructure	Uptime of 95% on router connectivity. Reliability of data lines not specified as Telkom provides this service
	Telecommunication infrastructure	Uptime of 95% on PABX and cabling infrastructure
	LAN infrastructure	Uptime of 95% on cabling, hubs and servers
	End user support	PCs and servers
		After a fault has been reported to the ICT Help Desk it must be attended to within 3 working days. If not rectified within 3 days, the approved escalation procedure must be followed to prioritise faults
		Manage the faults
		After the LAN managers receive their job cards daily, they attend to or rectify faults within 3 working days. If rectified the user signs the job cards and the ICT Help Desk system is updated. End users are expected to rate the quality of the service per reported fault
		Infrastructure support
		LAN managers implement new configurations/policies for sev- eral functionalities such as e-mail, Intranet, approved Internet, etc. These tasks are done when required on a project basis

Supporting activity	Product and services	Service standards
Manage and provide information and communica- tion technology support	ICT Help Desk services	Telephonic and e-mail-enabled ICT Help Desk that logs com- puter-related faults within an hour
services	ICT procurement co- ordination and support	Aso refer to the DoA procurement delegations. ICT procure- ment rules and procedures are decided upon by SITA (ITAC). The prescribed format of the business case to be utilised for procurement through ITAC will be kept updated and available on the Intranet by D: ICT. The use of this updated business case is compulsory. Tenders received will be submitted to ITAC within 7 days
	Secretariat services	DITC secretariat (monthly)
		Secretariat provides dates of all DITC meetings to all the di- rectorates at the beginning of the year. Applications of senior managers must be provided to the secretariat 2 weeks prior to each meeting to ensure placement on next DITC agenda. DITC agenda will be submitted to members at least 3 working days before the meeting. All DITC approvals will be provided to senior managers within 2 weeks after each meeting
		NATCCIM secretariat (three times a year)
		Secretariat will arrange the date and venue for each meeting. The secretariat will also finalise the agenda, distribute it and take minutes of the meeting. Minutes will be available within 4 weeks after the meeting

ANNEXURE 1(C)

Service standards: Human resources management

Supporting activity	Products and services	Service standards
To render an integrated human resources manage- ment service through the development of policies and practices benchmarked	Administration of organisa- tional and establishment (PERSAL) matters	 Implementation of governmental policies and prescripts (within 3 months of receipt of new legislation)
		Uniform interpretation of prescripts/legislation and consist- ent advice to managers
against best practices to ensure the attraction and		Updated personnel management system (within 5 days of approval)
retention of talented and motivated staff to a caring	Development of best HR	Implementation of delegations
work environment aimed at	policies and practices	Development of HR plan for DoA on a quarterly basis
improving service delivery and ensuring a healthy and		Facilitation of employee assistance programme [EAP]
safe work environment		Professional advice on HR policies and system
		 Staffing: Job evaluation and advertising of posts within 30 working days of being vacated or created Finalise an appointment within 30 working days of the closing date of applications
		 Merit and notch progression payments: Process notch and performance merit payment within 7 working days of receipt
		 Normal retirement benefits: Pension benefits to be processed 3 months before the actual retirement date (HR notified)
		 Resignation: Termination of service benefits (e.g. leave payment] to be processed within 14 working days of the notification of resignation
		 Leave management: Leave audits will be conducted annually
		 HR audits – General audits to be conducted once a year (minimum)
	Promotion and monitoring of healthy labour relations	The provision of training in the management of sound la- bour relations
		 Dissemination of information of employment legislation and cardinal labour decisions to all senior managers within 1 week of receipt
		Internal/external mediation and conciliation of disputes
		• The conducting of bilateral and multilateral negotiations (bimonthly)
		• Conduct and coordinate investigations and reports on mat- ters concerning misconduct, grievances, disputes, conflicts and labour unrest (initiate investigations within 2 weeks after referrals) and report within 20 days of commence- ment

Supporting activity	Products and services	Service standards
To render an integrated human resources manage- ment service through the		Visitation of regional offices/stations (20 and more) at least twice a year
development of policies and practices benchmarked against best practices to ensure the attraction and	Maintenance and review employee performance management systems	 HRM to compile (draft) a performance agreement for newly appointed SMS members within 1 month of service com- mencement
retention of talented and motivated staff to a caring		• Senior managers and above to submit a copy of the signed performance agreements to SM: HRM
work environment aimed at improving service delivery and ensuring a healthy and		Conduct job evaluation on all posts (within 2 weeks after request has been received)
safe work environment		 Align organisational structure with departmental strategic objectives (within 6 months after Minister has approved the structure)
		 Mutually agree to service standards of the specific organi- sational component within 1 month of service commence- ment
		• Formal assessment must be done on a quarterly basis. Undertake formal assessment within 1 month after the end of a quarter and submit copies of the relevant forms to the HRM unit
		 Final annual assessment must be completed and the rel- evant forms submitted for processing before the end of April each year to the relevant HRM unit
		Compile personal development plans within 1 month after an SMS member has commenced service and review at each formal assessment
	Development of policies and standards necessary to promote sound operational health and safety practices and monitoring compliance with legislation	 Management and monitoring injury on duty (IOD) and pro- vide monthly reports to SMS members
		The provision of early-warning system to detect significant and potential hazards
		Assisting employees in handling personal health problems and promoting a healthy lifestyle
		 Holding of monthly Health and Safety Committee meet- ings to raise awareness and ensure compliance with work- place safety legislation with regard to the Occupational Health and Safety Act (OHSA)
		Conducting workplace audits to prevent, reduce and/or eliminate incidences and accidents at least once a year
		 Coordinate DoA's HIV/Aids workplace programme and produce quarterly reports as per Interdepartmental Aids Committee's guidelines
	Employee development	• To produce a workplace skills plan (WSP) for the DoA with- in the time frame prescribed by Department of Labour
		 The internal Training Committee to meet at least bimonth- ly and distribute its munites to all SMS members at least 10 working days after its meeting
		• To produce quarterly training reports for submission to the relevant SETA at least 21 working days after the applicable quarter
		• To produce an annual training report for submission to DEXCO and the relevant SETA
		To review the internal HRD strategy once a year

ANNEXURE 1(D)

Service standards: Financial management

КРА	Objective	Supporting activity	Key performance indicators
Enhance good governance	To provide an enabling environment that supports the achievement of departmental objectives	 Financial management and advice Render a financial service Render a procurement and asset management service Coordinate budgetary inputs Manage agricultural debt, relevant securities and disburse funds in Agricultural Debt Account 	See the table below for the service standards

Supporting activity	Product and services	Service standards
1. Financial management and advice	Financial advice and evaluation	Within two days after receiving request
2. Render a financial service	Payment	On receipt of the correct documentation and provided that:
	Subsistence and transport advances	 The financial systems are operational Exceptional circumstances are not present that could influence payments Funds to be available within 8 working days
	Subsistence and transport claims	Settlement of claims within 10 working days
	Service providers	Payments should be effected within thirty days for services, for which the issuing of an order is not a requirement, after receipt of invoice that is correct in every respect. This process includes receipt and certification of invoices by chief users and processing by D: FS. Payment will be made within 8 days after receipt of the invoice
	• Overtime	 Settlement of claims within 10 working days with submission of timeous and correct documentation: Departmental claims paid <i>via</i> PERSAL—10 working days Other claims—15 working days
	Supplementary salary payments	Within 10 days after updating of PERSAL by D: HRM
	Salaries and allowances	On paydays according to PERSAL— provided that the system has been updated accordingly by D: HRM
	Petty cash	Daily on receipt of requests—provided that cash is available

Supporting activity	Product and services	Service standards
2. Render a financial service	Monthly distribution of debtor accounts	Within 3 working days after printing
	Conduct financial inspections	As per the approved inspection plan, taking available manpower and <i>ad hoc</i> requests into account
	 Month and year-end closure of books and compilation of financial statements 	Timeous within prescripts
	Re-issue of warrant vouchers	On receipt of confirmation from the Na- tional Treasury that the original payment has been stopped—within 8 days
	Report on revenue and expenditure	Timeous within National Treasury and departmental prescripts
 Render a procurement and asset management service which includes tenders, asset manage- ment, provisioning administration, transport and office accommoda- tion 	Administration of tenders	Allocation of tenders normally within 120 working days from receipt of the request for the invitation of a tender (including the advertisement, evalu- ation and adjudication of tenders) and on condition that evaluation is done within 15 working days
	Render an asset management service	
	Conduct departmental stock taking	Verify assets at least once in a financial year at all premises/offices of the department
	Movement of inventories	Updated within 3 working days after receipt of approved movement requisition
	Render a provisioning administration service	On receipt of the correct documentation and provided that LOGIS is operational
	Procurement of goods and services	Issue an order on receipt of a requisition that is correct in every respect—within 7 working days
	Issue: stationery store items	Within 5 working days on receipt of a requisition which is correct in every respect
	Payment of goods and services	Payments should be effected within 30 days after receipt of an invoice from suppliers. This process includes receipt and certification of invoices by chief users and processing by D: PAM.
	Render a transport service	
	Process requests for subsidised vehicles	Within 60 working days after receipt of request which is correct in every respect
	Process requests for withdrawal/ extension of subsidised vehicles	Within 60 working days after receipt of request which is correct in every respect
	Booking and issue of air tickets, rental vehicles and taxi services	Within 5 working days (in urgent cases within 24 hours) on the receipt of requisition

Supporting activity	Product and services	Service standards
 Render a procurement and asset management service which includes tenders, asset manage- ment, provisioning administration, transport and office accommoda- tion 	Issue of departmental/GG/pool vehicles Render an office accommodation service	Within 2 working days on receipt of a requisition (depending on the availability of vehicles)
	Execute capital works projects	Timeous within budgetary and PWD frameworks
	Maintenance/upgrading and alloca- tion planning of accommodation	Prompt execution on receipt of requests (depending on urgency)
4. Co-ordinate budgetary inputs	Co-ordinate MTEF/ENE inputs	
	Budgetary assistance	Timeous within prescripts
	Timeous distribution of financial reports	Seven days before evaluations must be submitted
	Compilation and distribution of state of expenditure reports	Timeous within National Treasury and departmental prescripts
5. Manage agricultural debt, relevant securities and disburse funds in the Agricultural Debt Accout	Recovering of agricultural debt Administer repayment agreements 	 Within the following prescripts and frameworks: Agricultural Debt Management Act, 2001 (Act No. 45 of 2001) Public Finance Management Act, 1999 (Act No. 1 of 1999) Treasury Regulations Departmental Financial Instructions Debt Management Frameworks
	 Administer claims against insolvent and deceased estates 	 Within said prescripts and frameworks including: Insolvency Act, 1936 (Act No. 24 of 1936) Administration of Estates Act, 1965 (Act No. 66 of 1965)
	Manage agricultural debt securities	Within said prescripts and frameworks to the best advantage to the State including Deeds Registries Act, 1937 (Act No. 47 of 1937)
	Execute inspections of agricultural debt securities	Within said prescripts and frameworks in order to safeguard the State's interest
	Administer write-offs	Within said prescripts and frameworks
	 Disburse funds in the Agricultural Debt Account 	Within approved disbursement framework

ANNEXURE 2(A)

Information management plan

BACKGROUND

A study of the information technology environment of the department made it possible to map the IT applications to the business functions and priorities of the department and determine the gaps. The shortcomings provided the one leg of the initiatives that need to be put into action. The other leg is provided by the progression of the strategic goals of the department into viable strategic ICT ventures. Prioritising these initiatives, a risk analysis of the different endeavours as well as cost estimates were undertaken and approved by DEXCO. This plan maps the medium term (3–5 years) initiatives to be undertaken in information management.

PURPOSE

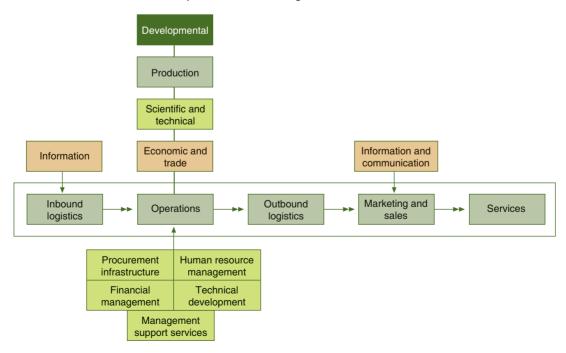

Central to the business activities of the DoA is the major responsibility of effective agricultural knowledge and information management. In support of this function a new generation of knowledge workers is required.

It is necessary that the knowledge worker should be empowered by information and knowledge that, in turn, is enabled by ICT. The obligation of the ICT service is to enable the knowledge base for the knowledge worker to render the appropriate service to the DoA client. It includes the assurance that the knowledge and information reach the DoA client and ensure that it contributes to the success of the agricultural enterprise in general. This relationship is critical if the DoA aims to successfully fulfil its role as custodian of information and knowledge in the agricultural sector.

The diverse nature of the agricultural sector requires that optimum integration and collaboration should be practised. The support of provinces, agricultural institutions and other stakeholders has become obligatory in the achievement of these objectives.

THE DOA VALUE CHAIN

The basic value chain of the DoA is depicted in the following model:

The DoA value chain is a synthesis of the Porter model infused with the logical business areas of the DoA. In principle, the DoA is an information services organisation that operates in a range of logical business areas. It is possible to map the value-added model onto the different activities and structure of the DoA—top management, directorates, the DoA regions and the provincial departments of agriculture (PDAs).

STRATEGIC INFORMATION INITIATIVES

As currently formulated, the proposed initiatives focus on investment in the following three sectors that can make rapid progress towards the elimination of hunger and the reduction of poverty.

- Extending the area under sustainable land management and reliable water control systems
- Improving rural infrastructure and market access, including inputs and finance (CASP)
- Increasing food supply and reducing hunger. In this regard food security is of critical importance

Different enterprises have long made use of specialised knowledge-based systems to support the task of creating solutions to problems. However, the current challenge is to provide an integrated set of applications that enable seamless execution across the entire problem-solving or opportunity-exploitation arena. Several key technologies and applications are emerging in the industry—many focused on better utilisation of people and knowledge. Group ware, Intranets, desktop video conferencing and shared electronic workspaces enhance communication and collaboration among people, essential to mobilising knowledge across the spectrum of the enterprise. The capability to put a solution on the table where requested, is a major driving force behind the service delivery of government departments. Integrating project planning with execution is proving crucial, where information brought closer to the general public can create an informed and empowered population. The DoA range of critically important programmes should be the main force behind the ICT support of the business.

To support these programmes an integrated ICT approach is necessary. This implies that the competent management of information becomes a prerequisite. It also means that the new occupation of knowledge worker must serve as a catalyst between the DoA business and the ICT environment. Only when knowledge is proficiently integrated with the business can synergy be obtained. It implies that the necessary expertise must be in place to achieve the objectives of information management. In the case of the DoA the primary service to the DoA client is the supply of knowledge. The required expertise in the DoA is consequently very important.

To support the business, the initiatives that have to be explored in the effort to satisfy the required service delivery requirements of the DoA, can be grouped under several headings. The headings have to some extent been aligned with the organisational programmes. The following table is a list of the different initiatives that have to be pursued.

No.	Business area initiative subject	Remarks
1.	Management	A dedicated executive information service (EIS) to manage is needed
1.1	Knowledge management	The implementation of knowledge management should be planned for a stage when the ICT and end-user maturity of the department have sufficiently evolved. The government information technology officer (GITO) can start to facilitate progression in this regard
1.2	Departmental integration of functions	There seems to be some fragmentation of the different systems em- ployed by the department. A higher level of integration between sys- tems must be established. Better integration of functions within the DoA would promote this integration
1.3	EIS/MIS—dashboard system	It is necessary for management to have readily available information about the performance of the DoA. It is important to note that project and programme management information is included in this perform- ance. Dashboard screens that reflect the performance in different criti- cal areas of the department should be included in the ICT service to management
1.4	Document management	The huge number of documents and reports processed in DoA makes a document management system a necessity
1.5	Cluster strategy	The minimum information interoperability standards (MIOS) not only suggest integration of systems but a significant level of collaboration

No.	Business area initiative subject	Remarks
		between departments. A dedicated effort should be initiated in this re- gard. In the case of the DoA, the DLA, DTI, DWAF, Environmental Af- fairs and Forestry are possible candidates for clustering. Establishing clusters of departments aligns with the architectural strategies on na- tional level
1.6	Norms and standards	It remains a major responsibility of the DoA to establish norms and standards. A renewed effort should be made in this regard
2.	Information management	
2.1	Information centre system (Batho Pele)	The disadvantage of the emerging farmer and the welfare of the com- mercial farmer necessitate sufficient exposure to information available to the farmer. To overcome the disadvantage a distributed information service has to be established in local areas, making agriculture exper- tise available to assist the farmer on the ground. This should tie in with the Gateway venture initiated on national level. A call centre can be introduced as a pilot venture for the information centre approach in the longer term. The mobility of the officers of the department must form part of the information supply design. Information should be available wherever the need arises. These initiatives can play a fundamental role in the enacting of CASP
2.2	Geographical system integration and sophistication	There are several databases without a geographical relationship. Through the AGIS system this can be resolved. The integration with the Gateway system is also applicable here. This links directly with CASP
2.3	Desktop publishing	The communication and information function of the DoA has to be ex- tended with appropriate desktop publishing facilities
2.4	Determine information needs of the stakeholders	There is a close relationship between the DoA and some of its stakeholders. A special effort must be made to establish the informa- tion needs of the stakeholders. Likewise the stakeholders are sources of information required by the DoA. A positive relationship should be developed in this regard
2.5	Extend the database of farmers in the country	The impression is that the data on the farmer community are not com- prehensive and that the integrity of the data is not above board. Exten- sion of the data and improving the quality should be undertaken. This may be applicable for several of the systems in operation in the depart- ment. This links directly with CASP
2.6	Extend the services to the emerging and commercial farmer	The services to the emerging farmer involve several issues. Like 2.5 above the data should be enhanced to ensure optimal assistance and impact
2.7	Support agricultural processes in all activities	It can serve a purpose to align the assistance of the DoA with the agri- cultural processes involved. It implies a logical organisation of support. The development of a range of models that is available to the DoA cli- ent base may be an appropriate starting point. Apart from the assist- ance, checks and balances can be included to identify best practices. This initiative could be an enabler to the CASP initiative
3.	Agricultural production	
3.1	Emerging farmer support	See 2.6 and 2.7
3.2	Production system integration	The agricultural industry is multifaceted and includes many disciplines. ICT systems can render an integrated service to the farming commu- nity to assist in the management of all the disciplines. It mplies that the attack should be broadened to have greater impact. Improved align- ment of assistance with the farming processes should be considered. See 2.7 above. The CASP is also important in achieving this objective

No.	Business area initiative subject	Remarks
3.3	Performance management	To increase agricultural productivity the performance of the farming sector should be measured. The statistics and results from the produc- tion on farms can serve as basis for the measurement and ultimately decisions taken. It relates to 3.2 and it also underlines the possibilities of best practices identification
3.4	Food security	Food security is one of the strategically important objectives of the DoA. Integration and enhancement of the system applications to endorse this objective should be investigated
3.5	Identification of training needs	The multifaceted nature of farming implies that the training and devel- opment of the farmer is very broad and complex. The actual need must be identified to ensure appropriate training and development
4.	Economy	
4.1	Establish relation between marketing opportunities and agriculture	The provision of a viable market for the farmer's produce is vital. Although there are some systems in this regard the DoA can enhance the assistance by establishing an extensive database for market op- portunities as part of a marketing information system
4.2	International trade development and control	The level of the exchange rate makes international markets obligatory for the farmer. Lucrative market identification and development can be supported by appropriate systems
5.	Development	
5.1	Training and development needs	See 3.5. It would be useful to consider the use of e-training for the farming community. This should, however, coincide with the development of the information centres and participation in the national Gateway project
6.	Human resources	
		The State Information Technology Agency (SITA) is at the moment drawing up some business requirement specifications in the HRM area. These should be continued. The development takes the Personnel and Salary Administration System (PERSAL) into account
7.	Research and development	
		Research and development is one of the cornerstones of knowledge management. Ways should be found to carry R&D information through to knowledge within the DoA as well as to stakeholders and clients
8.	MIS services	
8.1	Optimisation of Internet traffic capacity and band width (response times)	The line traffic of the department is continuously monitored. The speed (bandwidth) of this service has a direct impact on the satisfac- tion of the users, especially where web-enabled solutions are provided. The extension of the bandwidth should therefore be considered as an increasing number of mission critical applications are web driven

ANNEXURE 2(B)

Communication strategy for the Department of Agriculture 2006/07

INTRODUCTION

This strategy is informed by the *Strategic plan for the Department of Agriculture 2006* and the *Annual report 2004/05*. It is also informed by *The Strategic plan for South African agriculture 2001*, and the State of the Nation Address by President Thabo Mbeki on 3 February 2006. In addition, it is informed by the Government's Programme of Action and the Communication Clusters, which have a bearing on the department.

VISION

A united and prosperous agricultural sector

MISSION STATEMENT

The Department of Agriculuture aims to lead and support sustainable agriculture and promote rural development through:

- Ensuring access to suffient, safe and nutritious food
- · Eliminating skewed participation and inequity in the sector
- · Maximising growth, employment and income in agriculture
- · Enhancing the sustainable management of natural agricultural resources and ecological systems
- · Ensuring effective and efficient governance
- · Ensuring knowledge and information management

ORGANISATIONAL VALUES

- Bambanani
- Drive
- Excellence
- Innovation
- Integrity
- Maak 'n plan

BACKGROUND

The Department of Agriculture (DoA) has for the past three years been trying to co-ordinate its communication processes in the agricultural sector, namely provincial departments of agriculture; public entities for agriculture, and to a lesser degree, the local government. This received a boost, owing to the recently launched Comprehensive Agricultural Support Programme, supercharged task teams from the DoA, ITCA; CEO Forum and MinMec meetings, which have become the hallmark of delivery in this sphere.

We are developing this communication strategy following a succesful land summit, and subsequent to that the AgriBEE Indaba, where many issues were catapulted to the centre stage and became public discourse. Chief among these issues was the recommendation on the principle of "Willing seller willing buyer".

As we write this strategy, the world is concerned about the developments in the chicken industry from the Asian countries regarding the H5N1 Avian flu strain, which is said to affect human beings. Our quest is to allay fears that the flu strain prevalent in our country is different from the one that was prevalent in Asia. Moreover, there is no

clinical proof that the H5N2 strain of July 2004 that was eradicated in October 2005 could affect human beings. We therefore, have to keep the public informed and assure them that this country will never be complacent in dealing with the scourge of the flu.

OBJECTIVES

The objective of this strategy is to provide insight to taxpayers and political leaders and to monitor the implementation of the departmental programmes as captured in the *Strategic plan 2006*.

We aim to communicate clearly, without raising undue alarm, our themes and messages in the utmost professional manner. Bear in mind that agriculture contributes about 4 % to the growth of the economy in this country. We also want to demystify the perception that agriculture is a field meant for the intellectually less empowered, and that it is not a science. Ultimately, understanding the environment will make people realise that it is a requirement that each yard should have a vegetable garden to contribute to the betterment of life for all the people of South Africa.

Our objective is to consolidate the partnership for poverty eradication as well as accelerated growth and wealth creation, which will be done through the tackling of the agro-micro economic reforms in the country. This approach is seen as a new partnership to fast-track land reform—a new tracjectory towards 2014, where 30 % of the land should have been transferred to previously disadvantaged people.

We also aim to speed up the information dissemination so that those who are in the first economy are able to create a ladder of opportunities to enable those in the second economy to be exposed to the first economy.

Through the department's African Agricultural Development Programme, we are also contributing towards the objectives of NEPAD through the Comprehensive African Agricultural Development Programme.

ENVIRONMENT

The recommendations of the Land Summit of July 2005 made the discourse to be saturated with the pace at which land reform is taking place in this country. Some commentators say the country might, in dealing with issues of land reform, go the Zimbabwe route, but the Minister for Agriculture and Land Affairs has put it on record that our situation differs from the one in Zimbabwe. All of us should work together so that we can reach the best solution. Deputy President Phumzile Mlambo-Ngcuka also reckons that we should possibly learn from our neighbouring country so that we do not repeat the mistakes that they committed.

With regard to expertise and technical knowledge in the continent, South Africa is seen as the engine for agricultural growth. The department receives many requests from African countries through the NEPAD Secretariat to give inputs that could effect change in their agricultural environment.

The outbreak of animal diseases such as swine fever in the Eastern Cape and the eradication of notifiable avian influenza in the ostrich industry, as well as the latest developments of avian influenza, which is killing people in Asian countires, is stimulating people's interest in agricultural issues.

Our success story on the usage of conventional and community media has shown good results with regard to addressing the concerns of the consumers of our products. This has also been made possible by the engagements which the Minister, MECs, Councillors and top management of the three spheres of government have been having with different communities during the Izimbizo. Through such interactions with these communities, we are able to realise what is happening in the environment.

COMMUNICATION CHALLENGES

Communication components of the PDAs should be headed by SMS officials. The same applies to public entities for agriculture, which have to consider communication components as strategic management tools. Another challenge would be to streamline communication on issues involving the outbreak of animal diseases. If communication is not co-ordinated, there could be a threat to the stability of the economy, owing to huge outcry on the outbreak of diseases. Adequate leadership on the Cluster Task Team on Food and Nutrition in the Social Cluster should be seen as an intervention in the second economy that could reduce the level of poverty among our people by 2015.

Another challenge is to promote a national effort for accelerated progress towards a better life for all through the implementation of the Accelerated and Shared Growth Initiative of South Africa (ASGI-SA).

MESSAGES AND THEMES

Central theme: Age of hope—A national effort for faster and shared growth

(This comes from the affirmation of the confidence that the international community has in our our nation, arising from the country's achievements and progress with a call to all South Africans in all sectors to work together to do everything possible to use this opportunity to speed up progress towards a better life for all)

The core message and themes (relevant to DoA): • A growing economy that benefits all

- Batho Pele—effective and speedy delivery of services
- Africa's renewal and a better world

MESSENGERS, AUDIENCE, CHANNELS AND TYPES OF EVENTS

Messengers

- Minister and Deputy Minister
- Members of the Excecutive Councils (MECs) in Agriculture
- Director-General/Heads of Departments
- Chief of Communications
- Media Liaison Officer
- Provincial Heads of Communication
- Any delegated official

Audience

- Farming communities
- Organised farmworkers
- Organised Farmers' organisations
- Any individual interested in agriculture
- The international community

Channels/types of events

- Face-to-face public meetings
- Izimbizo (Presidential/Focus Weeks/Ministerial/Project Consolidate and departmental)
- AgriNews
- Radio; television and newspapers
- Community media
- InfoPaks
- Ad hoc publications

A PHASED COMMUNICATION PROGRAMME

As a department, our approach to communication on our priority areas as well as issues captured in the Government's Programme of Action will be to use this communication strategy as a generic one, where each campaign or project will use a media plan, which all stakeholders will have compiled. The media plan will enable the communication component of the department to publicise the project or event. It is possible that some programmes will have all three phases, namely pre/during the campaign and post/after the campaign. This emphasis will be determined by the nature of the event and the communication environment at that specific time.

STRUCTURES AND PROCESSES

The department has different management structures such as the Oversight Committee (comprises the DG; COO and the DDGs) which meets every Monday. The following committees meet fortnightly: GOPC, ICC and DEXCO (this committee is attended by the Director-General, Deputy Directors-General, Chief Operating Officer and all the Assistant Directors-General). The Departmental Management Committee (DMC) meets on quarterly basis and is attended by all SMS members.

The communication component has also established the Agricultural Communicators Forum, which meets on a quarterly basis. This forum is attended by all provincial Heads of Communication and the Heads of Communication from the public entities for agriculture. In addition the DoA hosts teleconferences, where all heads of communication take part. This year we have established a Department of Agriculture and Land Affairs Communicators Forum, which meets on a monthly basis. This forum discusses all communication-related matters affecting the two departments and the Ministry.

The issues are determined by the impact they have on the sector. There are those which have to be debated by different committees which are affiliated to DEXCO, while others would be determined by the final output; for instance, if an issue has to do with governance, it should first be presented to GOPC.

The management of the department is aware that the turn-around time for communication is different from other normal outputs and therefore, has made it easy for the communication component to evaluate the issues and channel these accordingly.

We will also use the Communication Cluster meetings as a platform to flag some of the communication-related issues so that the end products that should be communicated could be exposed to peer review. All these developments make us a force to be reckoned with regarding communication-related matters.

The approach that has been adopted is that all the departmental priority areas are co-ordinated from the Project Management Office, which, in turn, sets up different task teams for the excecution of these assignments.

STRATEGY DOCUMENT AND ACTION PLAN

Action plan

Priority area	Directorate/s	Programme	Activity	Target date
African Agricultural Development Programme (AADP)	Land Use and Soil Management (LUSM)			Q4
	International Relations (IR)			Q2
